

$[BookId, ChapterId]$

$$\frac{\begin{array}{l} books : \mathbb{F} \textit{BookId} \\ book_chapters : \textit{BookId} \rightarrow \mathbb{F} \textit{ChapterId} \end{array}}{books \subseteq \text{dom } book_chapters}$$

Later in document we can reference `book_chapters` globally:

$Answer == \{ b : \text{dom } book_chapters \mid \#(book_chapters(b)) > 5 \}$
