

$$\begin{array}{|l}
\textit{cumulative_total} : \mathbb{N} \\
\textit{not_yet_viewed} : \mathbb{N} \\
\textit{employee_count} : \mathbb{N} \\
\hline
\textit{cumulative_total} = 0 \wedge \\
\textit{not_yet_viewed} = 0 \wedge \\
\textit{employee_count} = 0
\end{array}$$

Simple subscript a_i renders differently from multi-word cumulative_total.
