

## Sequence Basics

### Example 1 : Sequence Types

Sequence types define collections of ordered elements:

$\text{seq } \mathbb{N}$   
 $\text{seq } \mathbb{Z}$   
 $\text{iseq } \mathbb{N}$

### Example 2 : Sequence Literals ( Unicode )

Sequences can be written with Unicode angle brackets:

$\langle \rangle$   
 $\langle a \rangle$   
 $\langle a, b, c \rangle$   
 $\langle 1, 2, 3, 4 \rangle$

### Example 3 : Sequence Literals ( ASCII )

ASCII angle brackets are also supported:

$\langle \rangle$   
 $\langle a \rangle$   
 $\langle a, b, c \rangle$   
 $\langle 1, 2, 3, 4 \rangle$

### Example 4 : Sequences elem Expressions

Sequences can appear in various contexts:

$s \in \text{seq } \mathbb{N}$   
 $\# \langle \rangle$   
 $\# \langle a, b, c, d \rangle$
