

Propositional logic

Solution 1

(a)

$$\text{false}(\text{as}(\text{true} \Rightarrow \text{false}) \Leftrightarrow \text{false})$$

(b)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{false}) \Leftrightarrow \text{true})$$

(c)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{true}) \Leftrightarrow \text{true})$$

(d)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{false}) \Leftrightarrow \text{true})$$

(Assuming that pigs can't fly . . .)

Solution 2

(a)

p	q	$p \wedge q$	$(p \wedge q) \Rightarrow p$
t	t	t	t
t	f	f	t
f	t	f	t
f	f	f	t

(b)

p	q	$p \wedge q$	$\neg p$	$\neg p \Rightarrow (p \wedge q)$	$(\neg p \Rightarrow (p \wedge q)) \Leftrightarrow p$
t	t	t	f	t	t
t	f	f	f	t	t
f	t	f	t	f	t
f	f	f	t	f	t

(c)

p	q	$p \Rightarrow q$	$p \wedge (p \Rightarrow q)$	$(p \wedge (p \Rightarrow q)) \Rightarrow q$
t	t	t	t	t
t	f	f	f	t
f	t	t	f	t
f	f	t	f	t

Solution 3

(a)

$$\begin{aligned}
 p \Rightarrow \neg p & \\
 &\Leftrightarrow \neg p \vee \neg p && [\Rightarrow] \\
 &\Leftrightarrow \neg p && [\text{idempotence}]
 \end{aligned}$$

(b)

$$\begin{aligned}
 \neg p \Rightarrow p & \\
 &\Leftrightarrow \neg \neg p \vee p && [\Rightarrow] \\
 &\Leftrightarrow p \vee p && [\neg \neg] \\
 &\Leftrightarrow p && [\text{idempotence}]
 \end{aligned}$$

(c)

$$\begin{aligned}
 p \Rightarrow (q \Rightarrow r) & \\
 &\Leftrightarrow \neg p \vee (q \Rightarrow r) && [\Rightarrow] \\
 &\Leftrightarrow \neg p \vee \neg q \vee r && [\Rightarrow] \\
 &\Leftrightarrow \neg p \vee \neg q \vee r && [\text{associativity}] \\
 &\Leftrightarrow \neg (p \wedge q) \vee r && [\text{De Morgan}] \\
 &\Leftrightarrow p \wedge q \Rightarrow r && [\Rightarrow]
 \end{aligned}$$

(d)

$$\begin{aligned}
 q \Rightarrow (p \Rightarrow r) & \\
 &\Leftrightarrow \neg q \vee (p \Rightarrow r) && [\Rightarrow] \\
 &\Leftrightarrow \neg q \vee \neg p \vee r && [\Rightarrow] \\
 &\Leftrightarrow \neg p \vee \neg q \vee r && [\text{associativity} \wedge \text{commutativity}] \\
 &\Leftrightarrow \neg p \vee (q \Rightarrow r) && [\Rightarrow] \\
 &\Leftrightarrow p \Rightarrow (q \Rightarrow r) && [\Rightarrow]
 \end{aligned}$$

(e)

$$\begin{aligned}
p \wedge q &\Leftrightarrow p && [\Leftrightarrow] \\
&\Leftrightarrow (p \wedge q \Rightarrow p) \wedge (p \Rightarrow p \wedge q) && [\Rightarrow] \\
&\Leftrightarrow (\neg(p \wedge q) \vee p) \wedge (\neg p \vee p \wedge q) && [\text{De Morgan}] \\
&\Leftrightarrow (\neg p \vee \neg q \vee p) \wedge (\neg p \vee p \wedge q) && [\text{associativity } \wedge \text{ comm.}] \\
&\Leftrightarrow (\neg q \vee \neg p \vee p) \wedge (\neg p \vee p \wedge q) && [\text{excluded middle}] \\
&\Leftrightarrow (\neg q \vee \text{true}) \wedge (\neg p \vee p \wedge q) && [\vee \wedge \text{true}] \\
&\Leftrightarrow \text{true} \wedge (\neg p \vee p \wedge q) && [\wedge \wedge \text{true}] \\
&\Leftrightarrow \neg p \vee p \wedge q && [\text{distribution}] \\
&\Leftrightarrow (\neg p \vee p) \wedge (\neg p \vee q) && [\text{excluded middle}] \\
&\Leftrightarrow \text{true} \wedge (\neg p \vee q) && [\wedge \wedge \text{true}] \\
&\Leftrightarrow \neg p \vee q && [\Rightarrow] \\
&\Leftrightarrow p \Rightarrow q
\end{aligned}$$

(f)

$$\begin{aligned}
p \vee q &\Leftrightarrow p && [\Leftrightarrow] \\
&\Leftrightarrow (p \vee q \Rightarrow p) \wedge (p \Rightarrow p \vee q) && [\Rightarrow] \\
&\Leftrightarrow (\neg(p \vee q) \vee p) \wedge (\neg p \vee p \vee q) && [\text{De Morgan}] \\
&\Leftrightarrow (\neg p \wedge \neg q \vee p) \wedge (\neg p \vee p \vee q) && [\text{distribution}] \\
&\Leftrightarrow (\neg p \vee p) \wedge (\neg q \vee p) \wedge (\neg p \vee p \vee q) && [\text{excluded middle}] \\
&\Leftrightarrow \text{true} \wedge (\neg q \vee p) \wedge (\neg p \vee p \vee q) && [\wedge \wedge \text{true}] \\
&\Leftrightarrow (\neg q \vee p) \wedge (\neg p \vee p \vee q) && [\text{associativity}] \\
&\Leftrightarrow (\neg q \vee p) \wedge (\text{true} \vee q) && [\text{excluded middle}] \\
&\Leftrightarrow (\neg q \vee p) \wedge \text{true} && [\vee \wedge \text{true}] \\
&\Leftrightarrow \neg q \vee p && [\wedge \wedge \text{true}] \\
&\Leftrightarrow q \Rightarrow p
\end{aligned}$$

Solution 4

(a) $(p \text{ or } q) \Leftrightarrow ((\text{not } p \text{ or not } q) \text{ and } q)$ is not a tautology. You might illustrate this via a truth table or via a chain of equivalences, showing that the proposition is not equivalent to true. Alternatively, you might try and find a combination of values for which the proposition is false. (In this case, the proposition is false when p and q are both true.)

(b) $(p \text{ or } q) \Leftrightarrow ((\text{not } p \text{ and not } q) \text{ or } q)$ is not a tautology. In this case, the proposition is false when p is true and q is false.

Solution 5

(a)

$\exists d: Dog \bullet gentle(d) \wedge well_t rained(d)$

(b)

$\forall d: Dog \bullet neat(d) \wedge well_t rained(d) \Rightarrow attractive(d)$

(c)

(Requires nested quantifier in implication - parser limitation)

Solution 6

(a)

This is a true proposition: whatever the value of x, the expression $x^2 - x + 1$ denotes a natural number. If we choose y to be this natural number, we will find that p is true.

(b)

This is a false proposition. We cannot choose a large enough value for y such that p will hold for any value of x.

(c)

This is a false proposition. It is an implication whose antecedent part is true and whose consequent part is false.

(d)

This is a true proposition. It is an implication whose antecedent part is false and whose consequent part is true.

Solution 7

(a)

We must define a predicate p that is false for at least one value of x , and is true for at least one other value. A suitable solution would be $p \Leftrightarrow x \neq 1$.

(b)

With the above choice of p , we require only that q is sometimes false when p is true (for else the universal quantification would hold). A suitable solution would be $q \Leftrightarrow x \neq 3$.

Solution 8

(a)

$$\forall x: N \bullet x \geq z$$

Equality**Solution 9**

(d)

$$\begin{aligned} \exists x: N \bullet x = 1 \wedge x > y \vee x = 2 \wedge x > z \\ \Leftrightarrow \exists x: N \bullet x = 1 \wedge x > y \vee \exists x: N \bullet x = 2 \wedge x > z \\ \Leftrightarrow 1 \in N \wedge 1 > y \vee \exists x: N \bullet x = 2 \wedge x > z \\ \Leftrightarrow 1 \in N \wedge 1 > y \vee 2 \in N \wedge 2 > z \\ \Leftrightarrow 1 > y \vee 2 > z \end{aligned}$$

Solution 10

As discussed, the quantifier $\exists!$ can help give rise to a 'test' or 'precondition' to ensure that an application of μ will work.

So, as a simple example, as the proposition

$$\exists_1 n: N \bullet \forall m: N \bullet n \leq m$$

is equivalent to true, we can be certain that the statement

$$\mu n: N \bullet \forall m: N \bullet n \leq m$$

will return a result (which happens to be 0).

Solution 11

(a)

$(\mu a: N \bullet a = a) = 0$ is a provable statement, since 0 is the only natural number with the specified property.

(b)

$(\mu b: N \bullet b = b) = 1$ is not provable. The specified property is true of both 0 and 1, and thus the value of the mu-expression is undefined.

(c)

$(\mu c: N \bullet c > c) = (\mu c: N \bullet c > c)$ is a provable statement. Neither expression is properly defined, but we may conclude that they are equal; there is little else that we can prove about them.

(d)

$(\mu d: N \bullet d = d) = 1$ is not a provable statement. We cannot confirm that 1 is the only natural number with the specified property; we do not know what value is taken by undefined operations.

Solution 12

(Requires mu-operator with expression part - not yet implemented)

(a)

$$\mu m: Mountain \mid \forall n: Mountain \bullet height(n) \leq height(m) \bullet height(m)$$

$$\mu c: Chapter \mid \exists_1 d: Chapter \bullet length(d) > length(c) \bullet length(c)$$

Assuming the existence of a suitable function, $\max: (\mu n: N \bullet n = \max(\{m: N \mid 8 * m < 100.8 * m\}) \cdot 100 - n)$

Deductive proofs

Solution 13

[illegible]

Solution 14

In one direction:

[illegible]

and the other:

$$\frac{\frac{\frac{\Gamma p \wedge q^{\neg[2]} \quad \Gamma p^{\neg[2]}}{p \wedge q \Rightarrow p} [\Rightarrow\text{-intro}^{[2]}] \quad \frac{\frac{\Gamma p^{\neg[3]} \quad \Gamma p \wedge q^{\neg[1]}}{p \Rightarrow p \wedge q} [\Rightarrow\text{-intro}^{[3]}]}{p \wedge q \Leftrightarrow p} [\Leftrightarrow\text{intro}]}{\Gamma p \Rightarrow q^{\neg[1]} \quad p \wedge q \Leftrightarrow p} [\Rightarrow\text{-intro}^{[1]}]$$

We can then combine these two proofs with \Leftrightarrow intro.

Solution 15

[illegible]

Solution 16

In one direction:

[illegible]

In the other:

[illegible]

Solution 17

In one direction:

$$\frac{\frac{\ulcorner p \vee q \wedge r \urcorner^{[3]} \quad \overline{(p \vee q) \wedge (p \vee r)}}{p \vee q \wedge r \Rightarrow (p \vee q) \wedge (p \vee r)} [\Rightarrow\text{-intro}^{[3]}] \quad [\vee \text{ elim } \wedge \wedge \text{ intro}]$$

and the other:

$$\frac{\ulcorner (p \vee q) \wedge (p \vee r) \urcorner^{[1]} \quad \ulcorner p \vee q \wedge r \urcorner^{[2]}}{(p \vee q) \wedge (p \vee r) \Rightarrow p \vee q \wedge r} [\Rightarrow\text{-intro}^{[1]}]$$

Solution 18

In one direction:

$$\frac{\ulcorner p \Rightarrow q \urcorner^{[1]} \quad \neg p \vee q}{(p \Rightarrow q) \Rightarrow \neg p \vee q} [\Rightarrow\text{-intro}^{[1]}]$$

and the other:

[illegible]

Sets and types

Solution 19

(a)

1 in 4, 3, 2, 1 is true.

(b)

1 in 1, 2, 3, 4 is undefined.

(c)

1 in 1, 2, 3, 4 is true.

(d)

The empty set in 1, 2, 3, 4 is undefined.

Solution 20

(a)

$\{1\} \times \{2, 3\}$

is the set (1, 2), (1, 3)

(b)

The empty set cross 2, 3 is the empty set

(c)

$\mathbb{P} \text{ emptyset} \times \{1\}$

is the set (emptyset, 1)

(d)

$(1, 2)$ cross $3, 4$ is the set $((1, 2), 3), ((1, 2), 4)$

Solution 21

There are various ways of describing these sets via set comprehensions. Examples are given below.

(a)

$$\{z : Z \mid 0 \leq z \wedge z \leq 100\}$$

(b)

$$\{z : Z \mid z = 10\}$$

(c)

$$\{z : Z \mid z \bmod 2 = 0 \vee z \bmod 3 = 0 \vee z \bmod 5 = 0\}$$

Solution 22

(a)

$$\{n : N \mid n \leq 4 \bullet n^2\}$$

(b)

$$\{n : N \mid n \leq 4 \bullet (n, n^2)\}$$

(c)

$$n : P\ 0, 1$$

(d)

$$n : P\ 0, 1 \text{ — true} . (n, \ n)$$

Solution 23

(a)

$$\begin{aligned}
x \in a \cap a \\
&\Leftrightarrow x \in a \wedge x \in a \\
&\Leftrightarrow x \in a
\end{aligned}$$

(b)

$$\begin{aligned}
x \in a \cup a \\
&\Leftrightarrow x \in a \vee x \in a \\
&\Leftrightarrow x \in a
\end{aligned}$$

Solution 24

(a)

The set of all pairs of integers is \mathbb{Z} cross \mathbb{Z} . To give it a name, we could write:

$$\text{Pairs} == \mathbb{Z} \times \mathbb{Z}$$

(b)

The set of all integer pairs in which each element is strictly greater than zero could be defined by:

$$\text{StrictlyPositivePairs} == \{ m, n : \mathbb{Z} \mid m > 0 \wedge n > 0 \bullet (m, n) \}$$

(c)

It is intuitive to use a singular noun for the name of a basic type; we define the set of all people by writing:

$$[Person]$$

(d)

The set of all couples could be defined by:

$$\text{Couples} == \{ s : \mathbb{P} \text{ Person} \mid \#s = 2 \}$$

Solution 25

(Requires generic set notation and Cartesian product)

Solution 26

(Requires generic parameters and relation type notation)

Relations**Solution 27**

(a)

The power set of $(0,0)$, $(0,1)$, $(1,0)$, $(1,1)$ is:

$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}, \{(1,0), (1,1)\}, \{(0,0), (0,1)\}, \{(0,1), (1,1)\}, \{(0,1), (1,0)\}, \{(0,$

(b)

$\emptyset, \{(0,0)\}, \{(0,1)\}, \{(0,0), (0,1)\}\}$

(c)

$\{\emptyset\}$

(d)

$\{\emptyset\}$

Solution 28

(a)

$\text{dom } R = \{0, 1, 2\}$

(b)

$\text{ran } R = \{1, 2, 3\}$

(c)

$\{1, 2\} \triangleleft R = \{1 \mapsto 2, 1 \mapsto 3, 2 \mapsto 3\}$

Solution 29

(a)

$$\{2 \mapsto 4, 3 \mapsto 3, 3 \mapsto 4, 4 \mapsto 2\}$$

(b)

$$\{1 \mapsto 3, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 1\}$$

(c)

$$\{1 \mapsto 1, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 4\}$$

(d)

$$\{1 \mapsto 4, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 1\}$$

Solution 30

$$\mid \quad \textit{childOf} : \textit{Person} \leftrightarrow \textit{Person}$$

(a)

$$\textit{parentOf} == \textit{childOf}^{-1}$$

This is a good example of how there are many different ways of writing the same thing. An alternative abbreviation is:

$$\textit{parentOf} == \{ x, y : \textit{Person} \mid x \mapsto y \in \textit{childOf} \bullet y \mapsto x \}$$

Or, via an axiomatic definition:

$$\frac{\mid \quad \textit{parentOf} : \textit{Person} \leftrightarrow \textit{Person}}{\mid \quad \textit{parentOf} = \textit{childOf}^{-1}}$$

(b)

$$\textit{siblingOf} == (\textit{childOf} \circ \textit{parentOf}) \setminus \textit{id}$$

(c)

$$\textit{cousinOf} == \textit{childOf} \circ \textit{siblingOf} \circ \textit{parentOf}$$

(d)

$$\textit{ancestorOf} == \textit{parentOf}^+$$

Solution 31

(Requires compound identifiers with operators - $R+$, R^*)

(a)

$$R == \{ a, b : N \mid b = a \vee b = a \}$$

(b)

$$S == \{ a, b : N \mid b = a \vee b = a \}$$

(c)

$$R+ == \{ a, b : N \mid b > a \}$$

(d)

$$R^* == \{ a, b : N \mid b \geq a \}$$

Solution 32

(a)

$$x \mapsto y \in A \triangleleft B \triangleleft R$$

$$\Leftrightarrow x \in A \wedge x \mapsto y \in (B \triangleleft R)$$

$$\Leftrightarrow x \in A \wedge x \in B \wedge x \mapsto y \in R$$

$$\Leftrightarrow x \in A \cap B \wedge x \mapsto y \in R$$

$$\Leftrightarrow x \mapsto y \in A \cap B \triangleleft R$$

(b)

$$x \mapsto y \in R \cup S \triangleright C$$

$$\Leftrightarrow x \mapsto y \in R \cup S \wedge y \in C$$

$$\Leftrightarrow (x \mapsto y \in R \vee x \mapsto y \in S) \wedge y \in C$$

$$\Leftrightarrow x \mapsto y \in R \wedge y \in C \vee x \mapsto y \in S \wedge y \in C$$

$$\Leftrightarrow x \mapsto y \in R \triangleright C \vee x \mapsto y \in S \triangleright C$$

$$\Leftrightarrow x \mapsto y \in (R \triangleright C) \cup (S \triangleright C)$$

Functions

Solution 33

The set of 9 functions:

$$\{\emptyset, \{(0, 0)\}, \{(0, 1)\}, \{(1, 1)\}, \{(1, 0)\}, \{(0, 0), (1, 1)\}, \{(0, 1), (1, 1)\}, \{(1, 0), (0, 0)\}, \{(0, 1), (1, 0)\}\}$$

(a)

The set of total functions:

$$\{\{(0, 0), (1, 1)\}, \{(0, 1), (1, 1)\}, \{(1, 0), (0, 0)\}, \{(0, 1), (1, 0)\}\}$$

(b)

The set of functions which are neither injective nor surjective:

$$\{\{(0, 1), (1, 1)\}, \{(0, 0), (1, 0)\}\}$$

(c)

The set of functions which are injective but not surjective:

$$\{\emptyset, \{(0, 0)\}, \{(0, 1)\}, \{(1, 0)\}, \{(1, 1)\}\}$$

(d)

There are no functions (of this type) which are surjective but not injective.

(e)

The set of bijective functions:

$$\{\{(0, 0), (1, 1)\}, \{(0, 1), (1, 0)\}\}$$

Solution 34

(a)

$$\{1 \mapsto a, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$$

(b)

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(c)

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(d)

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

Solution 35

(Requires power set notation P and relational image)

(a)

axdef

children : Person \rightarrow P Person

where

children = $p : \text{Person} \rightarrow p \rightarrow \text{parentOf}(\text{--- } p \text{ ---})$

end

(b)

axdef

number_of_grandchildren : Person $\rightarrow N$

where

number_of_grandchildren = $p : \text{Person} \rightarrow p \rightarrow (\text{parentOf} \circ \text{parentOf})(\text{--- } p \text{ ---})$

end

Solution 36

(Requires power set, function types, and ran keyword)

axdef

$\text{number}_{of_drivers} : (Drivers \rightarrow Cars) \rightarrow (Cars \rightarrow N)$

where

forall $r : Drivers \rightarrow Cars$ — $\text{number}_{of_drivers}(r) = c : \text{ran } r.c \mapsto \{ d : Drivers \mid d \mapsto c \in r \}$

end

Sequences

Solution 37

(a)

$\langle a \rangle$

(b)

$\{1 \mapsto a, 2 \mapsto b, 2 \mapsto a, 3 \mapsto c, 3 \mapsto b, 4 \mapsto d\}$

(c)

$\{2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(d)

$\{1, 2, 3, 4\}$

(e)

$\{a, b\}$

(f)

$\{a \mapsto 1, b \mapsto 2, c \mapsto 3, d \mapsto 4\}$

(g)

$\langle a, b \rangle$

(h)

$\{3 \mapsto b\}$

(i)

$\{a\}$

(j)

c

Solution 38

(a)

$f : \text{Place} \rightarrow \text{Place}$

$\forall p : \text{Place} \bullet f p = \{q : \text{Place} \mid p \mapsto q \in \text{ran } \text{trains}\}$

(Blocked by: juxtaposition $f p$ and Place)

(b)

$p : \text{Place} \rightarrow \exists! x : \text{dom } \text{trains} \rightarrow (\text{trains } x).2 = p$

(Blocked by: juxtaposition $\text{trains } x$)

(c)

$(\mu p : \text{Place} \rightarrow \forall q : \text{Place} \bullet p \neq q \rightarrow x : \text{dom } \text{trains} \rightarrow (\text{trains } x).2 = p \rightarrow x : \text{dom } \text{trains} \rightarrow (\text{trains } x).2 = q)$

(Blocked by: nested quantifiers in μ with multiple pipes)

Solution 39

(a)

$\text{large}_{c\text{oins}} : \text{Collection} \rightarrow N$

$\forall c : \text{Collection} \bullet \text{large}_{c\text{oins}}(c) = c(\text{large})$

(Blocked by: underscore in identifier for fuzz compatibility)

(b)

$\text{add}_{c\text{oin}} : \text{Collection} * \text{Coin} \rightarrow \text{Collection}$

$\forall c : \text{Collection} \bullet \forall d : \text{Coin} \bullet \text{add}_{c\text{oin}}(c, d) = c \cup \llbracket d \rrbracket$

(Blocked by: underscore in identifier and bag union)

Modelling

Solutions 40-52 are work in progress - many require features not yet implemented

Solution 40

(Work in progress - requires semicolon-separated bindings in set comprehensions)

(a)

$\text{hd} : \text{seq}(\text{Title} * \text{Length} * \text{Viewed})$

$\text{cumulative}_{\text{totalhd}} \leq 12000$

$\forall p : \text{ran } \text{hd} \bullet p.2 \leq 360$

Note that $\text{cumulative}_t \text{otalisdefinedinpart}(d)$.

(b)

$\{p: \text{ran } hd \mid p.2 > 120 \bullet p.1\}$

(c)

These can be defined recursively:

$\text{viewed } i\dot{\iota} = i\dot{\iota}$

$\text{viewed } i\dot{x}_{\dot{\iota}}^s = \text{if } x.3 = \text{yes then } \langle x \rangle^v \text{iewed selseviewed s}$

or otherwise (omitted - requires semicolon-separated bindings in set comprehension)

(d)

$$\left| \begin{array}{l} \text{cumulative}_t \text{otal} : \text{seq } Title * Length * Viewed \rightarrow N \\ \hline \text{cumulative}_t \text{otal}(\langle \rangle) = 0 \forall x: Title * Length * Viewed \bullet \forall s: \text{seq } Title * Length * Viewed \bullet \text{cumulative}_t \text{otal}(x \bullet s) = \text{cumulative}_t \text{otal}(x) + \text{viewed } s \end{array} \right|$$

(e)

$(\mu p : \text{ran } hd \mid \forall q: \text{ran } hd \bullet p \neq q \mid p.2 \dot{\iota} q.2 \mid p.1)$

(This, of course, assumes that there is a unique element with this property.)

(f)

(f) Omitted - requires semicolon-separated bindings in nested set comprehension

(g)

axdef

$g : \text{seq}(\text{Title} * \text{Length} * \text{Viewed}) \rightarrow \text{seq}(\text{Title} * \text{Length} * \text{Viewed})$

where

$\forall s : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \bullet g(s) = s \setminus \{x : \text{ran } s \mid x \neq \text{longest}_{\text{viewed}}(s)\}$

end

Where $\text{longest}_{\text{viewed}}$ is defined as

axdef

$\text{longest}_{\text{viewed}} : \text{seq}(\text{Title} * \text{Length} * \text{Viewed}) \rightarrow \text{Title} * \text{Length} * \text{Viewed}$

where

$\forall s : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \bullet \text{longest}_{\text{viewed}}(s) = (\mu p : \text{ran } s \bullet p.3 = \text{yes} \text{ and } \forall q : \text{ran } s \bullet p \neq q \wedge q.3 = \text{yes} \rightarrow p.2 \leq q.2)$

end

(Blocked by: nested quantifiers in mu expressions and \rightarrow operator)

This, of course, assumes that there is at least one viewed programme (and one of a unique maximum length).

(h)

$$\frac{s : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \rightarrow \text{seq } \text{Title} * \text{Length} * \text{Viewed}}{\forall x : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \bullet \text{items}(s(x)) = \text{items}(x) \wedge \forall i, j : \text{dom } s(x) \bullet i < j \Rightarrow s(x)(i).2 \geq s(x)(j).2}$$

Solution 41

(a)

axdef

records : Year \multimap_i Table

axdef

where

forall x : Entry; s : seq Entry — $total(i_i) = 0$ and $total(jx_i^s) = x.5 + totals$

end

(Blocked by: juxtaposition seq Entry)

Solution 42

[Person]

axdef

State : P (seq (iseq Person))

where

forall $s : \text{State} \text{---} \forall i, j : \text{dom } s \bullet i \neq j \text{---} \text{ran } (s \text{ } i) \text{ intersect } \text{ran } (s \text{ } j) =$

end

(Blocked by: juxtaposition P (seq (iseq Person)) and s i)

(b)

axdef

add : $N * \text{Person} * \text{State} \text{---}_i \text{State}$

where

$\forall n : N \bullet \forall p : \text{Person} \bullet \forall s : \text{State} \bullet n \in \text{dom } s \wedge p \notin \text{bigcup}(\text{ran } \text{ran } s) \text{---}$

add (n, p, s) = s ++ n $\text{---}_i (s \text{ } n) <_p >$

end

(Blocked by: ---_i operator and juxtaposition)

Solution 43

(a)

(i) $\forall i : \text{dom } \text{bookings} \bullet \text{forall } x, y : \text{bookings } i \text{---} x \neq y \text{---} (x.2..x.3) \text{ intersect } (y.2..y.3) =$

(ii) $\forall i : \text{dom } \text{bookings} \bullet \text{forall } x : \text{bookings } i \text{---} x.2, x.3 \text{ subseq } 1..\text{max } i.1$

(iii) $\forall i: \text{dom } bookings \bullet \text{forall } b: bookings \ i \text{ --- } b.2 \text{ } \models b.3$

(iv) This is enforced by the constraint for part (i).

(Blocked by: juxtaposition bookings i and max i.1)

(b)

(i) $\{i: \text{dom } bookings \mid i.1 = Banbury \bullet i.2\}$

(ii) $i: \text{dom } bookings \text{ --- } i.1 = Banbury \text{ and exists } b: bookings \ i \text{ --- } 50 \text{ in } b.2..b.3$

(iii) $r: \text{Room}; s: \mathbb{N} \text{ --- } \exists i: \text{dom } bookings \bullet i.1 = r \wedge i.2 = s. \ (r, s)$

(iv) $r: \text{Room} \text{ --- } \exists i: \text{dom } bookings \bullet i.1 = r \text{ --- } (\text{bookings } i) \text{ } \not\models 10$

(Blocked by: juxtaposition bookings i)

Free types and induction

Solution 44

The two cases of the proof are established by equational reasoning: the first by

$$\text{reverse } (j_i^t) = \text{reverset}[cat.1a] = (\text{reverset})^{<} > [cat.1b]$$

$$\text{where } cat.1a \text{ is } j_i^s = sandcat.1biss^{<} > = s$$

and the second by

$$\text{reverse } ((j_i^u)^t) = \text{reverse}(< x >^u)^t [cat.2]$$

$$= \text{reverse } (u^t)^{<} x > [reverse.2]$$

$$= (\text{reverse } t^r \text{everseu})^{<} x > [anti - distributive]$$

$$= \text{reverse } t^r (\text{reverseu}^{<} x >) [cat.2]$$

$$= \text{reverse } t^r \text{everse}(< x >^u) [reverse.2]$$

Solution 45

The base case:

$$\text{reverse}(\text{reverse } i_l) = \text{reverse } i_l [\text{reverse}.1] = i_l [\text{reverse}.1]$$

The inductive step:

$$\text{reverse}(\text{reverse}(i_l \text{ }^t))$$

$$= \text{reverse}((\text{reverse } t) \text{ }^{<x>})[\text{reverse}.2]$$

$$= \text{reverse}(i_l \text{ }^{reverse(reverset)})[\text{anti} - \text{distributive}]$$

$$= \text{reverse}(i_l \text{ }^{<x>})^{reverse(reverset)}[\text{cat}.1]$$

$$= ((\text{reverse } i_l) \text{ }^{<x>})^{reverse(reverset)}[\text{reverse}.2]$$

$$= (i_l \text{ }^{<x>})^{reverse(reverset)}[\text{reverse}.1]$$

$$= i_l \text{ }^{reverse(reverset)}[\text{cat}.1]$$

$$= i_l \text{ }^t[\text{reverse(reverset)} = t]$$

Solution 46

(a)

count : Tree \rightarrow N

count stalk = 0

$\forall n: N \bullet \text{count}(\text{leaf } n) = 1$

$$\forall t1, t2: Tree \bullet count(branch(t1, t2)) = count t1 + count t2$$

(Blocked by: recursive free types and pattern matching)

(b)

$$flatten : Tree \rightarrow seq N$$

$$flatten stalk = []$$

$$\forall n: N \bullet flatten(leaf n) = [n]$$

$$\forall t1, t2: Tree \bullet flatten(branch(t1, t2)) = flattent1 ^ flattent2$$

(Blocked by: recursive free types and pattern matching)

Solution 47

First, exhibit the induction principle for the free type:

$$P \text{ stalk and } (\forall n: N \bullet P(\text{leaf } n)) \text{ and } (\forall t1, t2: Tree \bullet P t1 \wedge P t2 \Rightarrow P \text{ branch}(t1, t2))$$

$$\text{implies } \forall t: Tree \bullet P t$$

This gives three cases for the proof:

$$(flatten stalk) = [] \quad [flatten] = 0 \quad [] = count stalk \quad [count]$$

(Remaining cases omitted - require equational reasoning with recursive functions)

Supplementary material : assignment practice

Solution 48

songs : F SongId

users : F UserId

playlists : PlaylistId \rightarrow Playlist

playlist_{owner} : PlaylistId \rightarrow UserId

playlist_{subscribers} : PlaylistId \rightarrow F1 UserId

$\forall i : \text{dom } playlists \bullet \text{ran}(\text{playlists } i) \text{ subseq songs}$

$\text{dom } \text{playlist}_{owner} \text{ subseq } \text{dom } \text{playlists}$

$\text{ran } \text{playlist}_{owner} \text{ subseq } \text{users}$

$\text{dom } \text{playlist}_{subscribers} \text{ subseq } \text{dom } \text{playlists}$

$\forall i : \text{dom } \text{playlist}_{subscribers} \bullet \text{playlist}_{subscribers } i \text{ subseq users}$

forall i : dom playlists — (playlist_{owner} i) in playlist_{subscribers} i

(Blocked by: \rightarrow operator, juxtaposition, underscores, F and F1 types)

Solution 49

hated : UserId \rightarrow F SongId

loved : UserId \rightarrow F SongId

dom hated subseq users

forall i : dom hated \rightarrow (hated i) subseq songs

dom loved subseq users

forall i : dom loved \rightarrow (loved i) subseq songs

forall i : dom hated union dom loved \rightarrow hated i intersect loved i = emptyset

(Blocked by: \rightarrow operator, juxtaposition, F type)

Solution 50

(a)

A == users bigcup (ran playlist_s subscribers)

(Blocked by: underscore in identifier, bigcup operator)

(b)

B == p : dom playlist_s subscribers | (playlist_s subscribers p) >= 100

(Blocked by: underscore in identifier, juxtaposition)

(c)

C == (mu u : dom loved \rightarrow $\forall v$: dom loved \bullet u \neq v \rightarrow (loved u) \rightarrow (loved v))

(Blocked by: nested quantifiers in mu)

(d)

$D \equiv (\mu s : \text{songs} \rightarrow \forall t : \text{songs} \bullet s \neq t \rightarrow u : \text{UserId} \rightarrow s \text{ in loved } u \wedge u : \text{UserId} \rightarrow t \text{ in loved } u)$

(Blocked by: nested quantifiers in mu, juxtaposition loved u)

Solution 51

(a)

Let's first define two helper functions:

$\text{love_ate_core} : \text{SongId} \rightarrow \mathbb{N}$

forall $i : \text{songs} \rightarrow u : \text{UserId} \rightarrow i \text{ in loved } u \wedge u : \text{UserId} \rightarrow i \text{ in hated } u$
 \Rightarrow

$\text{love_ate_core } i = u : \text{UserId} \mid i \text{ in loved } u - u : \text{UserId} \mid i \text{ in hated } u$

and

forall $i : \text{songs} \rightarrow u : \text{UserId} \rightarrow i \text{ in loved } u \wedge u : \text{UserId} \rightarrow i \text{ in hated } u \Rightarrow$

$\text{love_ate_core } i = 0$

$\text{playlist_count} : \text{SongId} \rightarrow \mathbb{N}$

$\forall i : \text{songs} \bullet \text{playlist_count } i = p : \text{dom playlist} \rightarrow i \text{ in ran playlist } p$

We then have:

$\text{length} : \text{SongId} \rightarrow \mathbb{N}$

$\text{popularity} : \text{SongId} \rightarrow \mathbb{N}$

$\text{dom length} \subseteq \text{songs}$

$\text{dom popularity} \subseteq \text{songs}$

$\forall i : \text{songs} \bullet \text{popularity } i = \text{love_hate_score } i + \text{playlist_count } i$

(Blocked by: \rightarrow operator, underscores, juxtaposition throughout)

(b)

$\text{most_popular} : \text{SongId}$

$(\exists i : \text{songs} \bullet \forall j : \text{songs} \bullet i \neq j \rightarrow \text{popularity } i \geq \text{popularity } j) \Rightarrow$

$\text{most_popular} = (\lambda i : \text{songs} \bullet \forall j : \text{songs} \bullet i \neq j \rightarrow \text{popularity } i \geq \text{popularity } j)$

and

$\text{not } (\exists i : \text{songs} \bullet \forall j : \text{songs} \bullet i \neq j \rightarrow \text{popularity } i \geq \text{popularity } j) \Rightarrow$

$\text{most_popular} = \text{null}$

(Blocked by: underscore, nested quantifiers, juxtaposition)

(c)

$\text{playlists}_c \text{ containing }_m \text{ost}_p \text{opular}_s \text{ong} == i : \text{domplaylists} \mid \text{most}_p \text{opularinranplaylists} i$

(Blocked by: underscores, juxtaposition playlists i)

Solution 52

(a)

$\text{premium}_p \text{lays} : \text{seqPlay} - > \text{seqPlay}$

$\text{premium}_p \text{lays}(<>) = <>$

forall x : Play; s : seq Play —

$\text{premium}_p \text{lays}(< x >^s) = < x >^{(\text{premium}_p \text{layss})} \text{ifuser}_s \text{tatus}(x.2) = \text{premium}$

$\text{premium}_p \text{layssifuser}_s \text{tatus}(x.2) = \text{standard}$

(Blocked by: underscores, juxtaposition user_s tatus(x.2))

(b)

$\text{standard}_p \text{lays} : \text{seqPlay} - > \text{seqPlay}$

$\text{standard}_p \text{lays}(<>) = <>$

forall x : Play; s : seq Play —

$\text{standard}_p \text{lays}(< x >^s) = < x >^{(\text{standard}_p \text{layss})} \text{ifuser}_s \text{tatus}(x.2) = \text{standard}$

$\text{standard}_p \text{layssifuser}_s \text{tatus}(x.2) = \text{premium}$

(Blocked by: underscores, juxtaposition)

(c)

$\text{cumulative}_\ell \text{length} : \text{seq Play} \rightarrow N$

$\text{cumulative}_\ell \text{length}(<>) = 0$

forall $x : \text{Play}$; $s : \text{seq Play}$ —

$\text{cumulative}_\ell \text{length}(< x >^s) = \text{length}(x.1) + \text{cumulative}_\ell \text{length}(s)$

(Blocked by: underscores, juxtaposition length (x.1))
