Propositional logic

Solution 1

(a) $\mathit{false}(\mathit{as}(\mathit{true} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{false})$

(b) $\mathit{true}(\mathit{as}(\mathit{false} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{true})$

(c) $\mathit{true}(\mathit{as}(\mathit{false} \Rightarrow \mathit{true}) \Leftrightarrow \mathit{true})$

(d)

$$\mathit{true}(\mathit{as}(\mathit{false} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{true})$$

(Assuming that pigs can't fly . . .)

Solution 2

(a)

p	q	$p \wedge q$	$(p \wedge q) \Rightarrow p$
t	t	t	t
t	f	f	t
f	t	f	t
f	f	f	t

(b)

p	q	$p \wedge q$	$\neg\, p$	$\neg\, p \Rightarrow (p \wedge q)$	$(\neg\, p \Rightarrow (p \wedge q)) \Leftrightarrow p$
t	t	t	f	t	t
t	f	f	f	t	t
f	t	f	t	f	t
f	f	f	t	f	t

(c)

p	q	$p \Rightarrow q$	$p \wedge (p \Rightarrow q)$	$(p \wedge (p \Rightarrow q)) \Rightarrow q$
t	t	t	t	t
t	f	f	f	t
f	t	t	f	t
f	f	t	f	t

Solution 3

(a)

$$\begin{aligned} & p \Rightarrow \neg\, p \\ & \quad \Leftrightarrow \neg\, p \vee \neg\, p && [\Rightarrow] \\ & \quad \Leftrightarrow \neg\, p && [\text{idempotence}] \end{aligned}$$

(b)

$$
\begin{aligned}
&\neg\, p \Rightarrow p \\
&\qquad \Leftrightarrow \neg\,\neg\, p \vee p && [\Rightarrow] \\
&\qquad \Leftrightarrow p \vee p && [\neg\ \neg\,] \\
&\qquad \Leftrightarrow p && [\text{idempotence}]
\end{aligned}
$$

(c)

$$
\begin{aligned}
&p \Rightarrow (q \Rightarrow r) \\
&\qquad \Leftrightarrow \neg\, p \vee (q \Rightarrow r) && [\Rightarrow] \\
&\qquad \Leftrightarrow \neg\, p \vee \neg\, q \vee r && [\Rightarrow] \\
&\qquad \Leftrightarrow \neg\, p \vee \neg\, q \vee r && [\text{associativity}] \\
&\qquad \Leftrightarrow \neg\, (p \wedge q) \vee r && [\text{De Morgan}] \\
&\qquad \Leftrightarrow p \wedge q \Rightarrow r && [\Rightarrow]
\end{aligned}
$$

(d)

$$
\begin{aligned}
&q \Rightarrow (p \Rightarrow r) \\
&\qquad \Leftrightarrow \neg\, q \vee (p \Rightarrow r) && [\Rightarrow] \\
&\qquad \Leftrightarrow \neg\, q \vee \neg\, p \vee r && [\Rightarrow] \\
&\qquad \Leftrightarrow \neg\, p \vee \neg\, q \vee r && [\text{associativity} \wedge \text{commutativity}] \\
&\qquad \Leftrightarrow \neg\, p \vee (q \Rightarrow r) && [\Rightarrow] \\
&\qquad \Leftrightarrow p \Rightarrow (q \Rightarrow r) && [\Rightarrow]
\end{aligned}
$$

(e)

$$
\begin{aligned}
&p \wedge q \Leftrightarrow p \\
&\qquad \Leftrightarrow (p \wedge q \Rightarrow p) \wedge (p \Rightarrow p \wedge q) && [\Leftrightarrow] \\
&\qquad \Leftrightarrow (\neg\, (p \wedge q) \vee p) \wedge (\neg\, p \vee p \wedge q) && [\Rightarrow] \\
&\qquad \Leftrightarrow (\neg\, p \vee \neg\, q \vee p) \wedge (\neg\, p \vee p \wedge q) && [\text{De Morgan}] \\
&\qquad \Leftrightarrow (\neg\, q \vee \neg\, p \vee p) \wedge (\neg\, p \vee p \wedge q) && [\text{associativity} \wedge \text{comm .}] \\
&\qquad \Leftrightarrow (\neg\, q \vee \mathit{true}) \wedge (\neg\, p \vee p \wedge q) && [\text{excluded middle}] \\
&\qquad \Leftrightarrow \mathit{true} \wedge (\neg\, p \vee p \wedge q) && [\vee \wedge \text{true}] \\
&\qquad \Leftrightarrow \neg\, p \vee p \wedge q && [\wedge \wedge \text{true}] \\
&\qquad \Leftrightarrow (\neg\, p \vee p) \wedge (\neg\, p \vee q) && [\text{distribution}] \\
&\qquad \Leftrightarrow \mathit{true} \wedge (\neg\, p \vee q) && [\text{excluded middle}] \\
&\qquad \Leftrightarrow \neg\, p \vee q && [\wedge \wedge \text{true}] \\
&\qquad \Leftrightarrow p \Rightarrow q && [\Rightarrow]
\end{aligned}
$$

(f)

$$
\begin{aligned}
&p \lor q \Leftrightarrow p \\
&\qquad \Leftrightarrow (p \lor q \Rightarrow p) \land (p \Rightarrow p \lor q) && [\Leftrightarrow] \\
&\qquad \Leftrightarrow (\neg\, (p \lor q) \lor p) \land (\neg\, p \lor p \lor q) && [\Rightarrow] \\
&\qquad \Leftrightarrow (\neg\, p \land \neg\, q \lor p) \land (\neg\, p \lor p \lor q) && [\text{De Morgan}] \\
&\qquad \Leftrightarrow (\neg\, p \lor p) \land (\neg\, q \lor p) \land (\neg\, p \lor p \lor q) && [\text{distribution}] \\
&\qquad \Leftrightarrow \mathit{true} \land (\neg\, q \lor p) \land (\neg\, p \lor p \lor q) && [\text{excluded middle}] \\
&\qquad \Leftrightarrow (\neg\, q \lor p) \land (\neg\, p \lor p \lor q) && [\land\ \land\ \text{true}] \\
&\qquad \Leftrightarrow (\neg\, q \lor p) \land (\neg\, p \lor p \lor q) && [\text{associativity}] \\
&\qquad \Leftrightarrow (\neg\, q \lor p) \land (\mathit{true} \lor q) && [\text{excluded middle}] \\
&\qquad \Leftrightarrow (\neg\, q \lor p) \land \mathit{true} && [\lor\ \land\ \text{true}] \\
&\qquad \Leftrightarrow \neg\, q \lor p && [\land\ \land\ \text{true}] \\
&\qquad \Leftrightarrow q \Rightarrow p && [\Rightarrow]
\end{aligned}
$$

Solution 4

(a) (p or q) $\Leftrightarrow$ ((not p or not q) and q) is not a tautology. You might illustrate this via a truth table or via a chain of equivalences, showing that the proposition is not equivalent to true. Alternatively, you might try and find a combination of values for which the proposition is false. (In this case, the proposition is false when p and q are both true.)

(b) (p or q) $\Leftrightarrow$ ((not p and not q) or q) is not a tautology. In this case, the proposition is false when p is true and q is false.

Solution 5

(a) $\exists\, d : \mathit{Dog} \bullet \mathit{gentle}(d) \land \mathit{well\_trained}(d)$

(b) $\forall\, d : \mathit{Dog} \bullet \mathit{neat}(d) \land \mathit{well\_trained}(d) \Rightarrow \mathit{attractive}(d)$

(c) (Requires nested quantifier in implication - parser limitation)

Solution 6

(a) This is a true $proposition : whatever the value of x, the expression x^2$ - x + 1 denotes a natural number. If we choose y to be this natural number, we will find that p is true.

(b) This is a false proposition. We cannot choose a large enough value for y such that p will hold for any value of x.

(c) This is a false proposition. It is an implication whose antecedent part is true and whose consequent part is false.

(d) This is a true proposition. It is an implication whose antecedent part is false and whose consequent part is true.

Solution 7

(a) We must define a predicate p that is false for at least one value of x, and is true for at least one other value. A suitable solution would be $p \Leftrightarrow x > 1$.

(b) With the above choice of p, we require only that q is sometimes false when p is true (for else the universal quantification would hold). A suitable solution would be $q \Leftrightarrow x > 3$.

Solution 8

(a) $\forall x \colon N \bullet x \geq z$

Equality

Solution 9

(d)

$$
\begin{aligned}
&\exists x \colon N \bullet x = 1 \wedge x > y \vee x = 2 \wedge x > z \\
&\qquad \Leftrightarrow \exists x \colon N \bullet x = 1 \wedge x > y \vee \exists x \colon N \bullet x = 2 \wedge x > z \\
&\qquad \Leftrightarrow 1 \in N \wedge 1 > y \vee \exists x \colon N \bullet x = 2 \wedge x > z \\
&\qquad \Leftrightarrow 1 \in N \wedge 1 > y \vee 2 \in N \wedge 2 > z \\
&\qquad \Leftrightarrow 1 > y \vee 2 > z
\end{aligned}
$$

Solution 10

As discussed, the quantifier $\exists_1$ can help give rise to a 'test' or 'precondition' to ensure that an application of mu will work.

So, as a simple example, as the proposition

$$\exists_1 n \colon N \bullet \forall m \colon N \bullet n \leq m$$

is equivalent to true, we can be certain that the statement

$$\mu n \colon N \bullet \forall m \colon N \bullet n \leq m$$

will return a result (which happens to be 0).

Solution 11

(a) (mu $a : N \mid a$= a) = 0 is a provable statement, since 0 is the only natural number with the specified property.

(b) $(\mu\, b : \mathbb{N} \bullet b = b) = 1$ is not provable. The specified property is true of both 0 and 1, and thus the value of the mu-expression is undefined.

(c) $(\mu\, c : \mathbb{N} \bullet c > c) = (\mu\, c : \mathbb{N} \bullet c > c)$ is a provable statement. Neither expression is properly defined, but we may conclude that they are equal; there is little else that we can prove about them.

(d) $(\mu\, d : \mathbb{N} \bullet d = d) = 1$ is not a provable statement. We cannot confirm that 1 is the only natural number with the specified property; we do not know what value is taken by undefined operations.

Solution 12

(Requires mu-operator with expression part - not yet implemented)

(a) $\mu\, m : \mathit{Mountain} \mid \forall\, n : \mathit{Mountain} \bullet \mathit{height}(n) \leq \mathit{height}(m) \bullet \mathit{height}(m)$

(b) $\mu\, c : \mathit{Chapter} \mid \exists_1\, d : \mathit{Chapter} \bullet \mathit{length}(d) > \mathit{length}(c) \bullet \mathit{length}(c)$

(c) Assuming the existence of a suitable function, max: $(\mu\, n : \mathbb{N} \bullet n = \mathit{max}(\{m : \mathbb{N} \mid 8 * m < 100.8 * m\})$. 100 - n)

Deductive proofs

Solution 13

$$\dfrac{\ulcorner p \wedge (p \Rightarrow q) \urcorner^{[1]} \qquad \dfrac{\dfrac{p \wedge (p \Rightarrow q)}{p}\,[\wedge\text{-elim}^{[1]}] \qquad \dfrac{\dfrac{p \wedge (p \Rightarrow q)}{p \Rightarrow q}\,[\wedge\text{-elim}^{[1]}] \quad \dfrac{p \wedge (p \Rightarrow q)}{p}\,[\wedge\text{-elim}^{[1]}]}{q}\,[\Rightarrow \text{elim}]}{p \wedge q}\,[\wedge \text{ intro}]}{p \wedge (p \Rightarrow q) \Rightarrow p \wedge q}\,[\Rightarrow\text{-intro}^{[1]}]$$

Solution 14

In one direction:

$$\dfrac{\ulcorner p \wedge q \Leftrightarrow p \urcorner^{[1]} \qquad \dfrac{\ulcorner p \urcorner^{[2]} \qquad \dfrac{\dfrac{\dfrac{}{p \wedge q}\,[\text{derived}]}{p \wedge q}\,[\Rightarrow \text{elim from } 1 \wedge 2]}{q}\,[\wedge\text{-elim}^{[3]}]}{p \Rightarrow q}\,[\Rightarrow\text{-intro}^{[2]}]}{(p \wedge q \Leftrightarrow p) \Rightarrow (p \Rightarrow q)}\,[\Rightarrow\text{-intro}^{[1]}]$$

and the other:

$$\dfrac{\ulcorner p \Rightarrow q \urcorner^{[1]} \qquad \dfrac{\dfrac{\ulcorner p \wedge q \urcorner^{[2]} \quad \ulcorner p \urcorner^{[2]}}{p \wedge q \Rightarrow p}\,[\Rightarrow\text{-intro}^{[2]}] \qquad \dfrac{\ulcorner p \urcorner^{[3]} \quad \ulcorner p \wedge q \urcorner^{[1]}}{p \Rightarrow p \wedge q}\,[\Rightarrow\text{-intro}^{[3]}]}{p \wedge q \Leftrightarrow p}\,[\Leftrightarrow \text{ intro}]}{(p \Rightarrow q) \Rightarrow (p \wedge q \Leftrightarrow p)}\,[\Rightarrow\text{-intro}^{[1]}]$$

We can then combine these two proofs *with* $\Leftrightarrow$ *intro*.

Solution 15

$$\dfrac{\ulcorner (p \Rightarrow q) \wedge \neg\, q \urcorner^{[1]} \qquad \dfrac{\ulcorner p \urcorner^{[2]} \qquad \dfrac{\dfrac{\ulcorner p \Rightarrow q \urcorner^{[1]} \quad \ulcorner p \urcorner^{[2]}}{q}\,[\Rightarrow \text{elim}] \qquad \ulcorner \neg\, q \urcorner^{[1]}}{\mathit{false}}\,[\text{false intro}]}{\neg\, p}\,[\text{false-elim}^{[2]}]}{(p \Rightarrow q) \wedge \neg\, q \Rightarrow \neg\, p}\,[\Rightarrow\text{-intro}^{[1]}]$$

Solution 16

In one direction:

$$\dfrac{\ulcorner p \wedge (q \vee r) \urcorner^{[1]} \qquad \dfrac{\ulcorner q \vee r \urcorner^{[1]} \qquad \dfrac{\dfrac{\ulcorner p \urcorner^{[1]} \quad \dfrac{}{q}\,[\text{case assumption}]}{p \wedge q}\,[\wedge\ \text{intro}]}{p \wedge q \vee p \wedge r}\,[\vee\ \text{intro}] \qquad \dfrac{\dfrac{\ulcorner p \urcorner^{[1]} \quad \dfrac{}{r}\,[\text{case assumption}]}{p \wedge r}\,[\wedge\ \text{intro}]}{p \wedge q \vee p \wedge r}\,[\vee\ \text{intro}]}{p \wedge q \vee p \wedge r}\,[\vee\text{-elim}^{[2]}]}{p \wedge (q \vee r) \Rightarrow p \wedge q \vee p \wedge r}\,[\Rightarrow\text{-intro}^{[1]}]$$

In the other:

$$\dfrac{\ulcorner p \wedge q \vee p \wedge r \urcorner^{[3]} \qquad \dfrac{\ulcorner \mathit{case}1 \vee \mathit{case}2 \urcorner^{[3]} \qquad \dfrac{\dfrac{\dfrac{}{p}\,[\wedge\ \text{elim}]}{q \vee r}\,[\vee\ \text{intro}]}{p \wedge (q \vee r)}\,[\wedge\ \text{intro}] \qquad \dfrac{\dfrac{\dfrac{}{p}\,[\wedge\ \text{elim}]}{q \vee r}\,[\vee\ \text{intro}]}{p \wedge (q \vee r)}\,[\wedge\ \text{intro}]}{p \wedge (q \vee r)}\,[\vee\text{-elim}^{[4]}]}{p \wedge q \vee p \wedge r \Rightarrow p \wedge (q \vee r)}\,[\Rightarrow\text{-intro}^{[3]}]$$

Solution 17

In one direction:

$$\dfrac{\ulcorner p \vee q \wedge r \urcorner^{[3]} \qquad \dfrac{}{(p \vee q) \wedge (p \vee r)}\ [\vee \text{ elim } \wedge \wedge \text{ intro}]}{p \vee q \wedge r \Rightarrow (p \vee q) \wedge (p \vee r)}\ [\Rightarrow\text{-intro}^{[3]}]$$

and the other:

$$\dfrac{\ulcorner (p \vee q) \wedge (p \vee r) \urcorner^{[1]} \qquad \ulcorner p \vee q \wedge r \urcorner^{[2]}}{(p \vee q) \wedge (p \vee r) \Rightarrow p \vee q \wedge r}\ [\Rightarrow\text{-intro}^{[1]}]$$

Solution 18

In one direction:

$$\dfrac{\ulcorner p \Rightarrow q \urcorner^{[1]} \qquad \neg\, p \vee q}{(p \Rightarrow q) \Rightarrow \neg\, p \vee q}\ [\Rightarrow\text{-intro}^{[1]}]$$

and the other:

$$\dfrac{\ulcorner \neg\, p \vee q \urcorner^{[3]} \qquad \dfrac{\ulcorner p \urcorner^{[4]} \qquad \ulcorner q \urcorner^{[3]}}{p \Rightarrow q}\ [\Rightarrow\text{-intro}^{[4]}]}{\neg\, p \vee q \Rightarrow (p \Rightarrow q)}\ [\Rightarrow\text{-intro}^{[3]}]$$

Sets and types

Solution 19

(a) 1 in $\{4, 3, 2, 1\}$ is true.

(b) $\{1\}$ in $\{1, 2, 3, 4\}$ is undefined.

(c) $\{1\}$ in $\{\{1\}, \{2\}, \{3\}, \{4\}\}$ is true.

(d) The empty set in $\{1, 2, 3, 4\}$ is undefined.

Solution 20

(a)

$$\{1\} \times \{2, 3\}$$

is the set $\{(1, 2), (1, 3)\}$

(b) The empty set cross $\{2, 3\}$ is the empty set

(c)

$$\mathbb{P}\,\emptyset \times \{1\}$$

is the set $\{(\emptyset, 1)\}$

(d) $\{(1,2)\}$ cross $\{3,4\}$ is the set $\{((1,2),3),((1,2),4)\}$

Solution 21

There are various ways of describing these sets via set comprehensions. Examples are given below.

(a) $\{z\colon Z \mid 0 \leq z \wedge z \leq 100\}$

(b) $\{z\colon Z \mid z = 10\}$

(c) $\{z\colon Z \mid z \bmod 2 = 0 \vee z \bmod 3 = 0 \vee z \bmod 5 = 0\}$

Solution 22

(a) $\{n\colon N \mid n \leq 4 \bullet n^2\}$

(b) $\{n\colon N \mid n \leq 4 \bullet (n, n^2)\}$

(c) $n : P0,\ 1$

(d) $\{n\colon \mathbb{P}\{0,1\} \mid \mathit{true} \bullet (n, \#n)\}$

Solution 23

(a)

$$\begin{aligned} &x \in a \cap a \\ &\qquad \Leftrightarrow x \in a \wedge x \in a \\ &\qquad \Leftrightarrow x \in a \end{aligned}$$

(b)

$$\begin{aligned} &x \in a \cup a \\ &\qquad \Leftrightarrow x \in a \vee x \in a \\ &\qquad \Leftrightarrow x \in a \end{aligned}$$

Solution 24

(a)

The set of all pairs of integers is Z cross Z. To give it a name, we could write:

Pairs == Z $\times Z$

(b)

The set of all integer pairs in which each element is strictly greater than zero could be defined by:

StrictlyPositivePairs == { m, n : $Z \mid m > 0 \land n > 0 \bullet (m, n)\}$

(c)

It is intuitive to use a singular noun for the name of a basic type; we define the set of all people by writing:

$[Person]$

(d)

The set of all couples could be defined by:

Couples == { s : $\mathbb{P}$ $Person \mid \#s = 2\}$

Solution 25

(Requires generic set notation and Cartesian product)

Solution 26

(Requires generic parameters and relation type notation)

Relations

Solution 27

(a)

The power set of $\{(0,0),(0,1),(1,0),(1,1)\}$ is:

$$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}, \{(1,0),(1,1)\}, \{(0,0),(0,1)\}, \{(0,1),(1,1)\}, \{(0,1),(1,0)\}, \{(0,0),(1,1)\}, \{(0,0)$$

(b) $\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(0,0),(0,1)\}\}$

(c) $\{\emptyset\}$

(d) $\{\emptyset\}$

Solution 28

(a) $\operatorname{dom} R = \{0, 1, 2\}$

(b) $\operatorname{ran} R = \{1, 2, 3\}$

(c) $\{1, 2\} \lhd R = \{1 \mapsto 2, 1 \mapsto 3, 2 \mapsto 3\}$

Solution 29

(a) $\{2 \mapsto 4, 3 \mapsto 3, 3 \mapsto 4, 4 \mapsto 2\}$

(b) $\{1 \mapsto 3, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 1\}$

(c) $\{1 \mapsto 1, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 4\}$

(d) $\{1 \mapsto 4, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 1\}$

Solution 30

$$\mathit{childOf} : \mathit{Person} \leftrightarrow \mathit{Person}$$

(a)

parentOf == childOf^{-1}

This is a good example of how there are many different ways of writing the same thing. An alternative abbreviation is:

parentOf == { x, y : $\mathit{Person} \mid x \mapsto y \in \mathit{childOf} \bullet y \mapsto x\}$

Or, via an axiomatic definition:

$$\begin{array}{|l}
\mathit{parentOf} : \mathit{Person} \leftrightarrow \mathit{Person} \\
\hline
\mathit{parentOf} = \mathit{childOf}^{-1}
\end{array}$$

(b)

siblingOf == (childOf $\circ \mathit{parentOf}) \setminus \mathit{id}$

(c)

cousinOf == childOf $\circ \mathit{siblingOf} \circ \mathit{parentOf}$

(d)

ancestorOf == parentOf^{+}

Solution 31

(Requires compound identifiers with operators - R+, R*)

(a)

R == { a, b : $N \mid b = a \vee b = a\}$

(b)

S == { a, b : $N \mid b = a \vee b = a\}$

(c) R+ == $\{a, b \colon N \mid b > a\}$

(d) R* == $\{a, b \colon N \mid b \geq a\}$

Solution 32

(a)

$$
\begin{aligned}
& x \mapsto y \in A \lhd B \lhd R \\
& \qquad \Leftrightarrow x \in A \wedge x \mapsto y \in (B \lhd R) \\
& \qquad \Leftrightarrow x \in A \wedge x \in B \wedge x \mapsto y \in R \\
& \qquad \Leftrightarrow x \in A \cap B \wedge x \mapsto y \in R \\
& \qquad \Leftrightarrow x \mapsto y \in A \cap B \lhd R
\end{aligned}
$$

(b)

$$
\begin{aligned}
& x \mapsto y \in R \cup S \rhd C \\
& \qquad \Leftrightarrow x \mapsto y \in R \cup S \wedge y \in C \\
& \qquad \Leftrightarrow (x \mapsto y \in R \vee x \mapsto y \in S) \wedge y \in C \\
& \qquad \Leftrightarrow x \mapsto y \in R \wedge y \in C \vee x \mapsto y \in S \wedge y \in C \\
& \qquad \Leftrightarrow x \mapsto y \in R \rhd C \vee x \mapsto y \in S \rhd C \\
& \qquad \Leftrightarrow x \mapsto y \in (R \rhd C) \cup (S \rhd C)
\end{aligned}
$$

Functions

Solution 33

The set of 9 functions:

$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,1)\}, \{(1,0)\}, \{(0,0),(1,1)\}, \{(0,1),(1,1)\}, \{(1,0),(0,0)\}, \{(0,1),(1,0)\}\}$

(a)

The set of total functions:

$$\{\{(0,0),(1,1)\}, \{(0,1),(1,1)\}, \{(1,0),(0,0)\}, \{(0,1),(1,0)\}\}$$

(b)

The set of functions which are neither injective nor surjective:

$$\{\{(0,1),(1,1)\},\{(0,0),(1,0)\}\}$$

(c)

The set of functions which are injective but not surjective:

$$\{\emptyset,\{(0,0)\},\{(0,1)\},\{(1,0)\},\{(1,1)\}\}$$

(d) There are no functions (of this type) which are surjective but not injective.

(e)

The set of bijective functions:

$$\{\{(0,0),(1,1)\},\{(0,1),(1,0)\}\}$$

Solution 34

(a) $\{1 \mapsto a, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(b) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(c) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(d) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

Solution 35

(Requires power set notation P and relational image)

(a)

$$\begin{array}{|l} children : Person \to \mathbb{P}\ Person \\ \hline children = \{p : Person \bullet p \mapsto parentOf(\!|\ \{p\}\ |\!)\} \end{array}$$

(b)

$$\begin{array}{|l} number\_of\_grandchildren : Person \to N \\ \hline number\_of\_grandchildren = \{p : Person \bullet p \mapsto \#parentOf \circ parentOf(\!|\ \{p\}\ |\!)\} \end{array}$$

Solution 36

(Note: This solution demonstrates relation types in quantifier domains)

$$\begin{array}{|l} number\_of\_drivers : Drivers \leftrightarrow Cars \to (Cars \to N) \\ \hline number\_of\_drivers = \lambda\, r : Drivers \leftrightarrow Cars \bullet \{c : \operatorname{ran} r \bullet c \mapsto \#\{d : Drivers \mid d \mapsto c \in r\}\} \end{array}$$

Sequences

Solution 37

(a) $\langle a \rangle$

(b) $\{1 \mapsto a, 2 \mapsto b, 2 \mapsto a, 3 \mapsto c, 3 \mapsto b, 4 \mapsto d\}$

(c) $\{2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(d) $\{1, 2, 3, 4\}$

(e) $\{a, b\}$

(f) $\{a \mapsto 1, b \mapsto 2, c \mapsto 3, d \mapsto 4\}$

(g) $\langle a, b \rangle$

(h) $\{3 \mapsto b\}$

(i) $\{a\}$

(j) c

Solution 38

(a)

$$\begin{array}{|l} f : \mathit{Place} \rightarrow \mathbb{P}\ \mathit{Place} \\ \hline \forall\, p\colon \mathit{Place} \bullet f(p) = \{q\colon \mathit{Place} \mid p \mapsto q \in \operatorname{ran} \mathit{trains}\} \end{array}$$

(b) $\{p\colon \mathit{Place} \mid \exists_1\, x\colon \operatorname{dom} \mathit{trains} \bullet \mathit{trains}(x).2 = p\}$

(c) $\mu\, p\colon \mathit{Place} \bullet \forall\, q\colon \mathit{Place} \bullet p \neq q \land \#\{x\colon \operatorname{dom} \mathit{trains} \mid \mathit{trains}(x).2 = p\} > \#\{x\colon \operatorname{dom} \mathit{trains} \mid \mathit{trains}(x).2 = q\}$

Solution 39

(a)

$\mathit{large\_coins} : \mathit{Collection} \rightarrow N$

$\forall\, c\colon \mathit{Collection} \bullet \mathit{large\_coins}(c) = c(\mathit{large})$

(Blocked $\mathit{by} : \mathit{underscoreinidentifierforfuzzcompatibility}$)

(b)

$\mathit{add\_coin} : \mathit{Collection} * \mathit{Coin} \rightarrow \mathit{Collection}$

$\forall\, c\colon \mathit{Collection} \bullet \forall\, d\colon \mathit{Coin} \bullet \mathit{add\_coin}(c, d) = c \cup [\![d]\!]$

(Blocked $\mathit{by} : \mathit{underscoreinidentifierandbagunion}$)

Modelling

Solutions 40-52 are work in progress - many require features not yet implemented

Solution 40

(Work in progress - requires semicolon-separated bindings in set comprehensions)

(a)

$hd : seq(Title * Length * Viewed)$

$cumulative\_total(hd) \leq 12000$

$\forall p : \operatorname{ran} hd \bullet p.2 \leq 360$

Note that cumulative$_t otalisdefinedinpart(d)$.

(b) $\{p : \operatorname{ran} hd \mid p.2 > 120 \bullet p.1\}$

(c)

These can be defined recursively:

$viewed : \text{seq } Programme \rightarrow \text{seq } Programme$

$viewed(\langle\rangle) = \langle\rangle \land \forall x : Programme \bullet \forall s : \text{seq } Programme \bullet viewed(\langle x \rangle \frown s) = (\text{if } x.3 = yes \text{ then } \langle x \rangle \frown viewe$

or otherwise (omitted - requires semicolon-separated bindings in set comprehension)

(d)

$cumulative\_total : \text{seq } Title * Length * Viewed \rightarrow N$

$cumulative\_total(\langle\rangle) = 0 \, \forall x : Title * Length * Viewed \bullet \forall s : \text{seq } Title * Length * Viewed \bullet cumulative\_total$

(e)

(mu $p : ranhd \; |\forall q : \operatorname{ran} hd \bullet p \neq q \land p.2 > q.2|$ p.1)

(This, of course, assumes that there is a unique element with this property.)

(f)

(f) Omitted - requires semicolon-separated bindings in nested set comprehension

(g)

axdef

$g : seq(Title * Length * Viewed) \rightarrow seq(Title * Length * Viewed)$

where

$\forall s\colon \text{seq } Title * Length * Viewed \bullet g(s) = s \rhd \{x\colon \operatorname{ran} s \mid x \neq longest\_viewed(s)\}$

end

Where longest$_v iewedisdefinedas$

axdef

$longest\_viewed : seq(Title * Length * Viewed)+ \rightarrow Title * Length * Viewed$

where

$\forall s\colon \text{seq } Title * Length * Viewed \bullet longest\_viewed(s) = (\mu\, p\colon \operatorname{ran} s \bullet p.3 = yes \text{and } \forall q\colon \operatorname{ran} s \bullet p \neq q \wedge q.3 = yes \wedge p.2 > q.2)$

end

This, of course, assumes that there is at least one viewed programme (and one of a unique maximum length).

(h)

$$\begin{array}{|l} s : \text{seq } Title * Length * Viewed \rightarrow \text{seq } Title * Length * Viewed \\ \hline \forall x\colon \text{seq } Title * Length * Viewed \bullet items(s(x)) = items(x) \wedge \forall i, j\colon \operatorname{dom} s(x) \bullet i < j \Rightarrow s(x)(i).2 \geq s(x)(j).2 \end{array}$$

Free types and induction

$[N]$

$Tree ::= stalk \mid leaf\langle\langle N\rangle\rangle \mid branch\langle\langle Tree \times Tree\rangle\rangle$

Solution 44

The two cases of the proof are established by equational $reasoning : thefirstby$

reverse $(\langle\rangle\ ^t) = reverset[cat.1a] = (reverset)\langle\rangle$ [cat.1b]

where cat.1a is $\langle\rangle$ s = s$andcat.1biss\langle\rangle$ = s

and the second by

reverse $((\langle x\rangle\ ^u)^t) = reverse(\langle x\rangle\ ^(u^t))[cat.2]$

= reverse (u $^t)\langle x\rangle$ [reverse.2]

= (reverse t $^r everseu)\langle x\rangle$ [anti-distributive]

= reverse t $^(reverseu\langle x\rangle)$ [cat.2]

= reverse t $^r everse(\langle x\rangle\ ^u)[reverse.2]$

Solution 45

The base case:

reverse (reverse $\langle\rangle$) = reverse $\langle\rangle$ [reverse.1] = $\langle\rangle$ [reverse.1]

The inductive step:

reverse (reverse ($\langle x \rangle$ ^{t}))

= reverse ((reverse t) $\langle x \rangle$) [reverse.2]

= reverse ($\langle x \rangle$) $^{r}everse(reverset)[anti - distributive]$

= reverse ($\langle x \rangle$ $\langle \rangle$) $^{r}everse(reverset)[cat.1]$

= ((reverse $\langle \rangle$) $\langle x \rangle$) $^{r}everse(reverset)[reverse.2]$

= ($\langle \rangle$ $\langle x \rangle$) $^{r}everse(reverset)[reverse.1]$

= $\langle x \rangle$ $^{r}everse(reverset)[cat.1]$

= $\langle x \rangle$ $^{t}[reverse(reverset) = t]$

Solution 46

(a)

$count : Tree \rightarrow N$

count $stalk = 0$

$\forall\, n \colon N \bullet count(leaf(n)) = 1$

$\forall\, t1, t2 \colon Tree \bullet count(branch(t1, t2)) = count(t1) + count(t2)$

(Blocked $by : recursivefreetypesandpatternmatching$)

(b)

$flatten : Tree \rightarrow seqN$

flatten stalk = $\langle \rangle$

$\forall n \colon N \bullet \mathit{flatten}(\mathit{leaf}(n)) = \langle n \rangle$

$\forall t1, t2 \colon \mathit{Tree} \bullet \mathit{flatten}(\mathit{branch}(t1, t2)) = \mathit{flatten}(t1^{\mathit{flatten}})(t2)$

(Blocked $by : \mathit{recursivefreetypesandpatternmatching}$)

Solution 47

First, exhibit the induction principle for the free type:

P stalk and ($\forall n \colon N \bullet \mathbb{P}\ \mathit{leaf}(n)$) and ($\forall t1, t2 \colon \mathit{Tree} \bullet \mathbb{P}\ t1 \land \mathbb{P}\ t2 \Rightarrow \mathbb{P}\ \mathit{branch}(t1, t2)$)

implies $\forall t \colon \mathit{Tree} \bullet \mathbb{P}\ t$

This gives three cases for the proof:

(flatten stalk) = $\langle\rangle$ [flatten] = 0 [] = count stalk [count]

(Remaining cases omitted - require equational reasoning with recursive functions)

Supplementary material : assignment practice

Solution 48

$[\mathit{SongId}, \mathit{UserId}, \mathit{PlaylistId}, \mathit{Playlist}]$

$\mathit{songs} : \mathbb{F}\ \mathit{SongIdusers} : \mathbb{F}\ \mathit{UserIdplaylists} : \mathit{PlaylistId} \pfun \mathit{PlaylistplaylistOwner} : \mathit{PlaylistId} \pfun \mathit{UserIdplaylistS}$

$\forall i \colon \operatorname{dom} \mathit{playlists} \bullet \operatorname{ran} \mathit{playlists}(i)(\mathit{subseteq})(\mathit{songs}) \operatorname{dom} \mathit{playlistOwner}(\mathit{subseteq})(\operatorname{dom} \mathit{playlists}) \operatorname{ran} \mathit{playlistO}$

Solution 49

$\mathit{hated} : \mathit{UserId} \pfun \mathbb{F}\ \mathit{SongIdloved} : \mathit{UserId} \pfun \mathbb{F}\ \mathit{SongId}$

$\operatorname{dom} \mathit{hated}(\mathit{subseteq})(\mathit{users}) \forall i \colon \operatorname{dom} \mathit{hated} \bullet \mathit{hated}(i)(\mathit{subseteq})(\mathit{songs}) \operatorname{dom} \mathit{loved}(\mathit{subseteq})(\mathit{users}) \forall i \colon \operatorname{dom}$

Solution 50

(a)

A == users $\setminus \bigcup \operatorname{ran} \mathit{playlistSubscribers}$

(b)

B == { p : $\operatorname{dom} \mathit{playlistSubscribers} \mid \#\mathit{playlistSubscribers}(p) \geq 100\}$

(c)

C == $\mu\, u\colon \operatorname{dom} \mathit{loved} \bullet \forall\, v\colon \operatorname{dom} \mathit{loved} \bullet u \neq v \wedge \#\mathit{loved}(u) > \#\mathit{loved}(v)$

(d)

D == $\mu\, s\colon \mathit{songs} \bullet \forall\, t\colon \mathit{songs} \bullet s \neq t \wedge \#\{u\colon \mathit{UserId} \mid s \in \mathit{loved}(u)\} > \#\{u\colon \mathit{UserId} \mid t \in \mathit{loved}(u)\}$

Solution 51

(a)

Let's first define two helper functions:

$\mathit{loveHateScore} : \mathit{SongId} + \rightarrow N$

$\forall\ i : \mathit{songs} \mid \{u\colon \mathit{UserId} \mid i \in \mathit{loved}(u)\} \geq\ \{u\colon \mathit{UserId} \mid i \in \mathit{hated}(u)\} \Rightarrow$

loveHateScore(i) = $\{u\colon \mathit{UserId} \mid i \in \mathit{loved}(u)\}$ - $\{u\colon \mathit{UserId} \mid i \in \mathit{hated}(u)\}$

and

$\forall\ i : \mathit{songs} \mid \{u\colon \mathit{UserId} \mid i \in \mathit{loved}(u)\} <\ \{u\colon \mathit{UserId} \mid i \in \mathit{hated}(u)\} \Rightarrow$

loveHateScore(i) = 0

$\mathit{playlistCount} : \mathit{SongId} \nrightarrow N$

$\forall\, i\colon \mathit{songs} \bullet \mathit{playlistCount}(i) = \#\{p\colon \operatorname{dom} \mathit{playlist} \mid i \in \operatorname{ran} \mathit{playlist}(p)\}$

We then have:

$$\begin{array}{|l} length : SongId \nrightarrow N popularity : SongId \nrightarrow N \\ \hline \mathrm{dom}\, length (subseteq)(songs)\ \mathrm{dom}\, popularity (subseteq)(songs) \forall i : songs \bullet popularity(i) = loveHateScore(i) + \end{array}$$

(b)

$mostPopular : SongId$

$(\exists_1\ i : songs\ |\forall j : songs \bullet i \neq j \land popularity(i) > popularity(j)) \Rightarrow$

mostPopular = (mu $i : songs\ |\forall j : songs \bullet i \neq j \land popularity(i) > popularity(j))$

and

$\neg\ \exists_1 i : songs \bullet \forall j : songs \bullet i \neq j \land popularity(i) > popularity(j) \Rightarrow mostPopular = nullSong$

(c) playlistsContainingMostPopularSong == $\{i :\ \mathrm{dom}\, playlists \mid mostPopular \in \mathrm{ran}\, playlists(i)\}$

Solution 52

(a)

$premiumPlays : seq(Play) \rightarrow seq(Play)$

premiumPlays($\langle\rangle$) = $\langle\rangle$

$\forall\ x : Play;\ s : seq(Play)\ |$

premiumPlays($\langle x \rangle\ ^s$) =$\langle x \rangle\ ^p remiumPlays(s) if userStatus(x.2) = premium$

premiumPlays(s) if userStatus(x.2) = standard

(Note: Uses camelCase for fuzz compatibility)

(b)

$standardPlays : seq(Play) \rightarrow seq(Play)$

standardPlays($\langle\rangle$) = $\langle\rangle$

$\forall\ x : Play;\ s : seq(Play)\ |$

standardPlays($\langle x \rangle\ ^s$) =$\langle x \rangle\ ^s tandardPlays(s) if userStatus(x.2) = standard$

standardPlays(s) if userStatus(x.2) = premium

(Note: Uses camelCase for fuzz compatibility)

(c)

$cumulativeLength : seq(Play) \to N$

cumulativeLength($\langle\rangle$) = 0

$\forall\ x : Play;\ s : seq(Play)\ |$

cumulativeLength($\langle x \rangle\ ^s$) = $length(x.1) + cumulativeLength(s)$

(Note: Uses camelCase for fuzz compatibility)
