Propositional logic

Solution 1

(a) $\mathit{false}(as(\mathit{true} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{false})$

(b) $\mathit{true}(as(\mathit{false} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{true})$

(c) $\mathit{true}(as(\mathit{false} \Rightarrow \mathit{true}) \Leftrightarrow \mathit{true})$

(d) $\mathit{true}(as(\mathit{false} \Rightarrow \mathit{false}) \Leftrightarrow \mathit{true})$

(Assuming that pigs can't fly . . .)

Solution 2

(a)

p	q	$p \wedge q$	$(\mathbf{p} \wedge \mathbf{q}) \Rightarrow \mathbf{p}$
t	t	t	$\mathbf{t}$
t	f	f	$\mathbf{t}$
f	t	f	$\mathbf{t}$
f	f	f	$\mathbf{t}$

(b)

p	q	$p \wedge q$	$\neg\, p$	$\neg\, p \Rightarrow (p \wedge q)$	$(\neg\, \mathbf{p} \Rightarrow (\mathbf{p} \wedge \mathbf{q})) \Leftrightarrow \mathbf{p}$
t	t	t	f	t	$\mathbf{t}$
t	f	f	f	t	$\mathbf{t}$
f	t	f	t	f	$\mathbf{t}$
f	f	f	t	f	$\mathbf{t}$

(c)

p	q	$p \Rightarrow q$	$p \wedge (p \Rightarrow q)$	$(\mathbf{p} \wedge (\mathbf{p} \Rightarrow \mathbf{q})) \Rightarrow \mathbf{q}$
t	t	t	t	$\mathbf{t}$
t	f	f	f	$\mathbf{t}$
f	t	t	f	$\mathbf{t}$
f	f	t	f	$\mathbf{t}$

Solution 3

(a)

$$
\begin{array}{ll}
p \Rightarrow \neg\, p & \\
\Leftrightarrow \neg\, p \vee \neg\, p & [\Rightarrow] \\
\Leftrightarrow \neg\, p & [\text{idempotence}]
\end{array}
$$

(b)

$$
\begin{array}{ll}
\neg\, p \Rightarrow p & \\
\Leftrightarrow \neg\, \neg\, p \vee p & [\Rightarrow] \\
\Leftrightarrow p \vee p & [\neg\ \ \neg\,] \\
\Leftrightarrow p & [\text{idempotence}]
\end{array}
$$

(c)

$$
\begin{array}{ll}
p \Rightarrow (q \Rightarrow r) & \\
\Leftrightarrow \neg\, p \vee (q \Rightarrow r) & [\Rightarrow] \\
\Leftrightarrow \neg\, p \vee \neg\, q \vee r & [\Rightarrow] \\
\Leftrightarrow \neg\, p \vee \neg\, q \vee r & [\text{associativity}] \\
\Leftrightarrow \neg\, (p \wedge q) \vee r & [\text{De Morgan}] \\
\Leftrightarrow p \wedge q \Rightarrow r & [\Rightarrow]
\end{array}
$$

(d)

$$
\begin{array}{ll}
q \Rightarrow (p \Rightarrow r) & \\
\Leftrightarrow \neg\, q \vee (p \Rightarrow r) & [\Rightarrow] \\
\Leftrightarrow \neg\, q \vee \neg\, p \vee r & [\Rightarrow] \\
\Leftrightarrow \neg\, p \vee \neg\, q \vee r & [\text{associativity} \wedge \text{commutativity}] \\
\Leftrightarrow \neg\, p \vee (q \Rightarrow r) & [\Rightarrow] \\
\Leftrightarrow p \Rightarrow (q \Rightarrow r) & [\Rightarrow]
\end{array}
$$

(e)

$$
\begin{array}{ll}
p \wedge q \Leftrightarrow p & \\
\Leftrightarrow (p \wedge q \Rightarrow p) \wedge (p \Rightarrow p \wedge q) & [\Leftrightarrow] \\
\Leftrightarrow (\neg\, (p \wedge q) \vee p) \wedge (\neg\, p \vee p \wedge q) & [\Rightarrow] \\
\Leftrightarrow (\neg\, p \vee \neg\, q \vee p) \wedge (\neg\, p \vee p \wedge q) & [\text{De Morgan}] \\
\Leftrightarrow (\neg\, q \vee \neg\, p \vee p) \wedge (\neg\, p \vee p \wedge q) & [\text{associativity} \wedge \text{comm .}] \\
\Leftrightarrow (\neg\, q \vee \mathit{true}) \wedge (\neg\, p \vee p \wedge q) & [\text{excluded middle}] \\
\Leftrightarrow \mathit{true} \wedge (\neg\, p \vee p \wedge q) & [\vee \wedge \text{true}] \\
\Leftrightarrow \neg\, p \vee p \wedge q & [\wedge \wedge \text{true}] \\
\Leftrightarrow (\neg\, p \vee p) \wedge (\neg\, p \vee q) & [\text{distribution}] \\
\Leftrightarrow \mathit{true} \wedge (\neg\, p \vee q) & [\text{excluded middle}] \\
\Leftrightarrow \neg\, p \vee q & [\wedge \wedge \text{true}] \\
\Leftrightarrow p \Rightarrow q & [\Rightarrow]
\end{array}
$$

(f)

$$
\begin{array}{ll}
p \vee q \Leftrightarrow p & \\
\Leftrightarrow (p \vee q \Rightarrow p) \wedge (p \Rightarrow p \vee q) & [\Leftrightarrow] \\
\Leftrightarrow (\neg\, (p \vee q) \vee p) \wedge (\neg\, p \vee p \vee q) & [\Rightarrow] \\
\Leftrightarrow (\neg\, p \wedge \neg\, q \vee p) \wedge (\neg\, p \vee p \vee q) & [\text{De Morgan}] \\
\Leftrightarrow (\neg\, p \vee p) \wedge (\neg\, q \vee p) \wedge (\neg\, p \vee p \vee q) & [\text{distribution}] \\
\Leftrightarrow \mathit{true} \wedge (\neg\, q \vee p) \wedge (\neg\, p \vee p \vee q) & [\text{excluded middle}] \\
\Leftrightarrow (\neg\, q \vee p) \wedge (\neg\, p \vee p \vee q) & [\wedge \wedge \text{true}] \\
\Leftrightarrow (\neg\, q \vee p) \wedge (\neg\, p \vee p \vee q) & [\text{associativity}] \\
\Leftrightarrow (\neg\, q \vee p) \wedge (\mathit{true} \vee q) & [\text{excluded middle}] \\
\Leftrightarrow (\neg\, q \vee p) \wedge \mathit{true} & [\vee \wedge \text{true}] \\
\Leftrightarrow \neg\, q \vee p & [\wedge \wedge \text{true}] \\
\Leftrightarrow q \Rightarrow p & [\Rightarrow]
\end{array}
$$

Solution 4

(a) $p \vee q \Leftrightarrow (\neg\, p \vee \neg\, q) \wedge q$ is $\neg\, a$ tautology. You might illustrate this via a truth table or via a chain of equivalences, showing that the proposition is not equivalent to true. Alternatively, you might try and find a combination of values for which the proposition is false. (In this case, the proposition is false when p and q are both true.)

(b) $p \vee q \Leftrightarrow \neg\, p \wedge \neg\, q \vee q$ is $\neg\, a$ tautology. In this case, the proposition is false when p is true and q is false.

Solution 5

(a) $\exists\, d\colon Dog \bullet gentle(d) \land well\_trained(d)$

(b) $\forall\, d\colon Dog \bullet neat(d) \land well\_trained(d) \Rightarrow attractive(d)$

(c) $\exists\, d\colon Dog \bullet gentle(d) \Rightarrow \forall\, t\colon Trainer \bullet groomed(d, t)$

Solution 6

(a) This is a true proposition: whatever the value of x, the expression x^2 - x + 1 denotes a natural number. If we choose y to be this natural number, we will find that p is true.

(b) This is a false proposition. We cannot choose a large enough value for y such that p will hold for any value of x.

(c) This is a false proposition. It is an implication whose antecedent part is true and whose consequent part is false.

(d) This is a true proposition. It is an implication whose antecedent part is false and whose consequent part is true.

Solution 7

(a) We must define a predicate p that is false for at least one value of x, and is true for at least one other value. A suitable solution would be $p \Leftrightarrow x > 1$.

(b) With the above choice of p, we require only that q is sometimes false when p is true (for else the universal quantification would hold). A suitable solution would be $q \Leftrightarrow x > 3$.

Solution 8

(a) $\forall\, x\colon \mathbb{N} \bullet x \geq z$

(b) $\forall\, z\colon \mathbb{N} \bullet z \geq x + y$

(c) $x + 3 > 0 \land \forall\, z\colon \mathbb{N} \bullet z \geq x + 3$

Equality

Solution 9

(a)

$$\begin{array}{ll}
\exists\, y\colon \mathbb{N} \bullet y \in \{0, 1\} \land y \neq 1 \land x \neq y & \\
\Leftrightarrow \exists\, y\colon \mathbb{N} \bullet y = 0 \land x \neq y & \text{[arithmetic]} \\
\Leftrightarrow 0 \in \mathbb{N} \land x \neq 0 & \text{[one - point rule]} \\
\Leftrightarrow x \neq 0 &
\end{array}$$

(b)

$$\begin{array}{l}
\exists\, x, y\colon \mathbb{N} \bullet x + y = 4 \land x < y \\
\Leftrightarrow \exists\, x, y\colon \mathbb{N} \bullet y = 4 - x \land x < y \\
\Leftrightarrow \exists\, x\colon \mathbb{N} \bullet 4 - x \in \mathbb{N} \land x < 4 - x \\
\Leftrightarrow \mathit{true}
\end{array}$$

The final equivalence holds because $0 \in N$, $4 - 0 \in N$, and $0 < 4$.

(c)

$$\begin{aligned}
&\forall x : \mathbb{N} \bullet \exists y : \mathbb{N} \bullet x = y + 1 \\
&\Leftrightarrow \forall x : \mathbb{N} \bullet \exists y : \mathbb{N} \bullet y = x - 1 \\
&\Leftrightarrow \forall x : \mathbb{N} \bullet x - 1 \in \mathbb{N}
\end{aligned}$$

The final equivalence holds because $0 \in N$ and yet $0 - 1 \notin N$. We may assume that the subtraction operator is defined for all integers.

(d)

$$\begin{aligned}
&\exists x : \mathbb{N} \bullet x = 1 \land x > y \lor x = 2 \land x > z \\
&\Leftrightarrow \exists x : \mathbb{N} \bullet x = 1 \land x > y \lor \exists x : \mathbb{N} \bullet x = 2 \land x > z \\
&\Leftrightarrow 1 \in \mathbb{N} \land 1 > y \lor \exists x : \mathbb{N} \bullet x = 2 \land x > z \\
&\Leftrightarrow 1 \in \mathbb{N} \land 1 > y \lor 2 \in \mathbb{N} \land 2 > z \\
&\Leftrightarrow 1 > y \lor 2 > z
\end{aligned}$$

Solution 10

As discussed, the quantifier $\exists_1$ can help give rise to a 'test' or 'precondition' to ensure that an application of mu will work.

So, as a simple example, as the proposition

$\exists_1\, n : \mathbb{N} \bullet \forall m : \mathbb{N} \bullet n \leq m$

is equivalent to true, we can be certain that the statement

$\mu\, n : \mathbb{N} \bullet \forall m : \mathbb{N} \bullet n \leq m$

will return a result (which happens to be 0).

Solution 11

(a) $\mu\, a : \mathbb{N} \bullet a = a = 0$

is a provable statement, since 0 is the only natural number with the specified property.

(b) $\mu\, b : \mathbb{N} \bullet b = b = 1$

is not provable. The specified property is true of both 0 and 1, and thus the value of the mu-expression is undefined.

(c) $\mu\, c : \mathbb{N} \bullet c > c = \mu\, c : \mathbb{N} \bullet c > c$

is a provable statement. Neither expression is properly defined, but we may conclude that they are equal; there is little else that we can prove about them.

(d) $\mu\, d : \mathbb{N} \bullet d = d = 1$

is ¬ a provable statement. We cannot confirm that 1 is the only natural number with the specified property; we do not know what value is taken by undefined operations.

Solution 12

(Requires mu-operator with expression part - not yet implemented)

(a) $\mu\, m{:}\, \mathit{Mountain} \mid \forall\, n{:}\, \mathit{Mountain} \bullet \mathit{height}(n) \leq \mathit{height}(m) \bullet \mathit{height}(m)$

(b) $\mu\, c{:}\, \mathit{Chapter} \mid \exists_1\, d{:}\, \mathit{Chapter} \bullet \mathit{length}(d) > \mathit{length}(c) \bullet \mathit{length}(c)$

(c) Assuming the existence of a suitable function, max: $(\mu\, n{:}\, \mathbb{N} \bullet n = \mathit{max}(\{m{:}\, \mathbb{N} \mid 8 * m < 100.8 * m\})$. 100 - n)

Deductive proofs

Solution 13

$$\dfrac{\ulcorner p \land (p \Rightarrow q) \urcorner^{[1]} \qquad \dfrac{\dfrac{\dfrac{}{p \land (p \Rightarrow q)}\;[\text{fromabove}]}{p}\;[\land\text{ -elim}^{[1]}] \qquad \dfrac{\dfrac{\dfrac{}{p \land (p \Rightarrow q)}\;[\text{fromabove}]}{p \Rightarrow q}\;[\land\text{ -elim}^{[1]}] \quad \dfrac{\dfrac{}{p \land (p \Rightarrow q)}\;[\text{fromabove}]}{p}\;[\land\text{ -elim}^{[1]}]}{q}\;[\Rightarrow\text{ elim}]}{p \land q}\;[\land\text{ intro}]}{p \land (p \Rightarrow q) \Rightarrow p \land q}\;[\Rightarrow\text{ -intro}^{[1]}]$$

Solution 14

In one direction:

$$\dfrac{\ulcorner p \land q \Leftrightarrow p \urcorner^{[1]} \qquad \dfrac{\ulcorner p \urcorner^{[2]} \qquad \dfrac{\dfrac{\dfrac{}{p \land q}\;[\text{derived}]}{p \land q}\;[\Rightarrow\text{ elimfrom1} \land 2]}{q}\;[\land\text{ -elim}^{[3]}]}{p \Rightarrow q}\;[\Rightarrow\text{ -intro}^{[2]}]}{(p \land q \Leftrightarrow p) \Rightarrow (p \Rightarrow q)}\;[\Rightarrow\text{ -intro}^{[1]}]$$

and the other:

$$\dfrac{\ulcorner p \Rightarrow q \urcorner^{[1]} \qquad \dfrac{\dfrac{\ulcorner p \land q \urcorner^{[2]} \quad \dfrac{}{p}\;[\land\text{ -elim}^{[2]}]}{p \land q \Rightarrow p}\;[\Rightarrow\text{ -intro}^{[2]}] \qquad \dfrac{\ulcorner p \urcorner^{[3]} \quad \dfrac{}{p \land q}\;[\land\text{ introfrom1} \land 3]}{p \Rightarrow p \land q}\;[\Rightarrow\text{ -intro}^{[3]}]}{p \land q \Leftrightarrow p}\;[\Leftrightarrow\text{ intro}]}{(p \Rightarrow q) \Rightarrow (p \land q \Leftrightarrow p)}\;[\Rightarrow\text{ -intro}^{[1]}]$$

We can then combine these two proofs *with* ⇔ *intro*.

Solution 15

$$\dfrac{\ulcorner (p \Rightarrow q) \land \lnot\, q \urcorner^{[1]} \qquad \dfrac{\ulcorner p \urcorner^{[2]} \qquad \dfrac{\dfrac{\dfrac{}{p \Rightarrow q}\;[\land\text{ -elim}^{[1]}] \quad \ulcorner p \urcorner^{[2]}}{q}\;[\Rightarrow\text{ elim}] \qquad \dfrac{}{\lnot\, q}\;[\land\text{ -elim}^{[1]}]}{\mathit{false}}\;[\text{falseintro}]}{\lnot\, p}\;[\text{false-elim}^{[2]}]}{(p \Rightarrow q) \land \lnot\, q \Rightarrow \lnot\, p}\;[\Rightarrow\text{ -intro}^{[1]}]$$

Solution 16

In one direction:

$$\dfrac{\ulcorner p \wedge (q \vee r)\urcorner^{[1]} \qquad \dfrac{\ulcorner q \vee r \urcorner^{[1]} \qquad \dfrac{\dfrac{\dfrac{}{p}\,[\wedge\text{ -elim}^{[1]}] \quad \dfrac{}{q}\,[\text{caseassumption}]}{p \wedge q}\,[\wedge\text{ intro}]}{p \wedge q \vee p \wedge r}\,[\vee\text{ intro}] \qquad \dfrac{\dfrac{\dfrac{}{p}\,[\wedge\text{ -elim}^{[1]}] \quad \dfrac{}{r}\,[\text{caseassumption}]}{p \wedge r}\,[\wedge\text{ intro}]}{p \wedge q \vee p \wedge r}\,[\vee\text{ intro}]}{p \wedge q \vee p \wedge r}\,[\vee\text{ -elim}^{[2]}]}{p \wedge (q \vee r) \Rightarrow p \wedge q \vee p \wedge r}\,[\Rightarrow\text{ -intro}^{[1]}]$$

In the other:

$$\dfrac{\ulcorner p \wedge q \vee p \wedge r \urcorner^{[3]} \qquad \dfrac{\ulcorner \mathit{case}1 \vee \mathit{case}2 \urcorner^{[3]} \qquad \dfrac{\dfrac{}{p}\,[\wedge\text{ elim}] \quad \dfrac{}{q \vee r}\,[\vee\text{ intro}]}{p \wedge (q \vee r)}\,[\wedge\text{ intro}] \qquad \dfrac{\dfrac{}{p}\,[\wedge\text{ elim}] \quad \dfrac{}{q \vee r}\,[\vee\text{ intro}]}{p \wedge (q \vee r)}\,[\wedge\text{ intro}]}{p \wedge (q \vee r)}\,[\vee\text{ -elim}^{[4]}]}{p \wedge q \vee p \wedge r \Rightarrow p \wedge (q \vee r)}\,[\Rightarrow\text{ -intro}^{[3]}]$$

Solution 17

In one direction:

$$\dfrac{\ulcorner p \vee q \wedge r \urcorner^{[3]} \qquad \dfrac{}{(p \vee q) \wedge (p \vee r)}\,[\vee\text{ elim }\wedge\wedge\text{ intro}]}{p \vee q \wedge r \Rightarrow (p \vee q) \wedge (p \vee r)}\,[\Rightarrow\text{ -intro}^{[3]}]$$

and the other:

$$\dfrac{\ulcorner (p \vee q) \wedge (p \vee r) \urcorner^{[1]} \qquad \dfrac{}{p \vee q \wedge r}\,[\vee\text{ elimfrom2} \wedge 3]}{(p \vee q) \wedge (p \vee r) \Rightarrow p \vee q \wedge r}\,[\Rightarrow\text{ -intro}^{[1]}]$$

Solution 18

In one direction:

$$\dfrac{\ulcorner p \Rightarrow q \urcorner^{[1]} \qquad \dfrac{}{\neg\, p \vee q}\,[\vee\text{ elimfromexcludedmiddle}]}{(p \Rightarrow q) \Rightarrow \neg\, p \vee q}\,[\Rightarrow\text{ -intro}^{[1]}]$$

and the other:

$$\dfrac{\ulcorner \neg\, p \lor q \urcorner^{[3]} \qquad \dfrac{\ulcorner p \urcorner^{[4]} \quad \dfrac{}{q}\ [\lor \text{ elim} \land \text{false-elim}^{[3]}]}{p \Rightarrow q}\ [\Rightarrow\text{-intro}^{[4]}]}{\neg\, p \lor q \Rightarrow (p \Rightarrow q)}\ [\Rightarrow\text{-intro}^{[3]}]$$

Sets and types

Solution 19

(a) 1 in $\{4, 3, 2, 1\}$ is true.

(b) $\{1\}$ in $\{1, 2, 3, 4\}$ is undefined.

(c) $\{1\}$ in $\{\{1\}, \{2\}, \{3\}, \{4\}\}$ is true.

(d) The empty set in $\{1, 2, 3, 4\}$ is undefined.

Solution 20

(a) $\{1\} \times \{2, 3\}$

is the set $\{(1, 2), (1, 3)\}$

(b) The empty set cross $\{2, 3\}$ is the empty set

(c) $\mathbb{P}\,\emptyset \times \{1\}$

is the set $\{(\emptyset, 1)\}$

(d) $\{(1, 2)\}$ cross $\{3, 4\}$ is the set $\{((1, 2), 3), ((1, 2), 4)\}$

Solution 21

There are various ways of describing these sets via set comprehensions. Examples are given below.

(a) $\{z : \mathbb{Z} \mid 0 \leq z \land z \leq 100\}$

(b) $\{z : \mathbb{Z} \mid z = 10\}$

(c) $\{z : \mathbb{Z} \mid z \mathbin{\mathsf{mod}} 2 = 0 \lor z \mathbin{\mathsf{mod}} 3 = 0 \lor z \mathbin{\mathsf{mod}} 5 = 0\}$

Solution 22

(a) $\{n : \mathbb{N} \mid n \leq 4 \bullet n^2\}$

(b) $\{n : \mathbb{N} \mid n \leq 4 \bullet (n, n^2)\}$

(c) $\{n : \mathbb{P}\{0, 1\}\}$

(d) $\{n : \mathbb{P}\{0, 1\} \mid \mathit{true} \bullet (n, \# n)\}$

Solution 23

(a)

$$x \in a \cap a$$
$$\Leftrightarrow x \in a \land x \in a$$
$$\Leftrightarrow x \in a$$

(b)

$$x \in a \cup a$$
$$\Leftrightarrow x \in a \lor x \in a$$
$$\Leftrightarrow x \in a$$

Solution 24

(a)

The set of all pairs of integers is Z cross Z. To give it a name, we could write:

$$\mathit{Pairs} == \mathbb{Z} \times \mathbb{Z}$$

(b)

The set of all integer pairs in which each element is strictly greater than zero could be defined by:

$$\mathit{StrictlyPositivePairs} == \{m, n : \mathbb{Z} \mid m > 0 \land n > 0 \bullet (m, n)\}$$

(c)

It is intuitive to use a singular noun for the name of a basic type; we define the set of all people by writing:

$$[\mathit{Person}]$$

(d)

The set of all couples could be defined by:

$$\mathit{Couples} == \{s : \mathbb{P}\,\mathit{Person} \mid \#s = 2\}$$

Solution 25

$$\mathit{Requires}(\mathit{generic})(\mathit{set})(\mathit{notation}) \land \mathit{Cartesian}(\mathit{product})$$

Solution 26

$$\mathit{Requires}(\mathit{generic})(\mathit{parameters}) \land \mathit{relation}(\mathit{type})(\mathit{notation})$$

Relations

Solution 27

(a)

The power set of $\{(0,0),(0,1),(1,0),(1,1)\}$ is:

$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}, \{(1,0),(1,1)\}, \{(0,0),(0,1)\}, \{(0,1),(1,1)\}, \{(0,1),(1,0)\}, \{(0,0),(1,1)\}, \{(0,0),(1,0$

(b) $\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(0,0),(0,1)\}\}$

(c) $\{\emptyset\}$

(d) $\{\emptyset\}$

Solution 28

(a) $\operatorname{dom} R = \{0,1,2\}$

(b) $\operatorname{ran} R = \{1,2,3\}$

(c) $\{1,2\} \lhd R = \{1 \mapsto 2, 1 \mapsto 3, 2 \mapsto 3\}$

Solution 29

(a) $\{2 \mapsto 4, 3 \mapsto 3, 3 \mapsto 4, 4 \mapsto 2\}$

(b) $\{1 \mapsto 3, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 1\}$

(c) $\{1 \mapsto 1, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 4\}$

(d) $\{1 \mapsto 4, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 1\}$

Solution 30

$$\mathit{childOf} : \mathit{Person} \leftrightarrow \mathit{Person}$$

(a)

$$\mathit{parentOf} == \mathit{childOf}^{-1}$$

This is a good example of how there are many different ways of writing the same thing. An alternative abbreviation is:

$$\mathit{parentOf} == \{x, y \colon \mathit{Person} \mid x \mapsto y \in \mathit{childOf} \bullet y \mapsto x\}$$

Or, via an axiomatic definition:

$$\begin{array}{|l} \mathit{parentOf} : \mathit{Person} \leftrightarrow \mathit{Person} \\ \hline \mathit{parentOf} = \mathit{childOf}^{-1} \end{array}$$

(b)

$$\mathit{siblingOf} == (\mathit{childOf} \circ \mathit{parentOf}) \setminus \mathit{id}$$

(c)

$$cousinOf == childOf \circ siblingOf \circ parentOf$$

(d)

$$ancestorOf == parentOf^{+}$$

Solution 31

(Requires compound identifiers with operators - R+, R*)

(a)

$$R == \{a, b : \mathbb{N} \mid b = a \vee b = a\}$$

(b)

$$S == \{a, b : \mathbb{N} \mid b = a \vee b = a\}$$

(c) R+ $== \{a, b : \mathbb{N} \mid b > a\}$

(d) R* $== \{a, b : \mathbb{N} \mid b \geq a\}$

Solution 32

(a)

$$\begin{array}{l} x \mapsto y \in A \lhd B \lhd R \\ \Leftrightarrow x \in A \wedge x \mapsto y \in (B \lhd R) \\ \Leftrightarrow x \in A \wedge x \in B \wedge x \mapsto y \in R \\ \Leftrightarrow x \in A \cap B \wedge x \mapsto y \in R \\ \Leftrightarrow x \mapsto y \in A \cap B \lhd R \end{array}$$

(b)

$$\begin{array}{l} x \mapsto y \in R \cup S \rhd C \\ \Leftrightarrow x \mapsto y \in R \cup S \wedge y \in C \\ \Leftrightarrow (x \mapsto y \in R \vee x \mapsto y \in S) \wedge y \in C \\ \Leftrightarrow x \mapsto y \in R \wedge y \in C \vee x \mapsto y \in S \wedge y \in C \\ \Leftrightarrow x \mapsto y \in R \rhd C \vee x \mapsto y \in S \rhd C \\ \Leftrightarrow x \mapsto y \in (R \rhd C) \cup (S \rhd C) \end{array}$$

Functions

Solution 33

The set of 9 functions:

$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,1)\}, \{(1,0)\}, \{(0,0),(1,1)\}, \{(0,1),(1,1)\}, \{(1,0),(0,0)\}, \{(0,1),(1,0)\}\}$

(a)

The set of total functions:

$\{\{(0,0),(1,1)\}, \{(0,1),(1,1)\}, \{(1,0),(0,0)\}, \{(0,1),(1,0)\}\}$

(b)

The set of functions which are neither injective nor surjective:

$\{\{(0,1),(1,1)\}, \{(0,0),(1,0)\}\}$

(c)

The set of functions which are injective but not surjective:

$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}\}$

(d) There are no functions (of this type) which are surjective but not injective.

(e)

The set of bijective functions:

$\{\{(0,0),(1,1)\}, \{(0,1),(1,0)\}\}$

Solution 34

(a) $\{1 \mapsto a, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(b) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(c) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(d) $\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

Solution 35

$\mathit{Requires}(\mathit{power})(\mathit{set})(\mathit{notation})(P) \land \mathit{relational}(\mathit{image})$

(a)

$$\begin{array}{|l}
\mathit{children} : \mathit{Person} \to \mathbb{P}\,\mathit{Person} \\
\hline
\mathit{children} = \{p \colon \mathit{Person} \bullet p \mapsto (\mathit{parentOf}(\!|\ \{p\}\ |\!))\}
\end{array}$$

(b)

$$\begin{array}{|l}
number_of_grandchildren : Person \rightarrow \mathbb{N} \\
\hline
number_of_grandchildren = \{p : Person \bullet p \mapsto \#(parentOf \circ parentOf (\!|\ \{p\}\ |\!))\}
\end{array}$$

Solution 36

(Note: This solution demonstrates relation types in quantifier domains)

$$\begin{array}{|l}
number_of_drivers : Drivers \leftrightarrow Cars \rightarrow (Cars \rightarrow \mathbb{N}) \\
\hline
number_of_drivers = \lambda\, r : Drivers \leftrightarrow Cars \bullet \{c : \operatorname{ran} r \bullet c \mapsto \#\{d : Drivers \mid d \mapsto c \in r\}\}
\end{array}$$

Sequences

Solution 37

(a) $\langle a \rangle$

(b) $\{1 \mapsto a, 2 \mapsto b, 2 \mapsto a, 3 \mapsto c, 3 \mapsto b, 4 \mapsto d\}$

(c) $\{2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(d) $\{1, 2, 3, 4\}$

(e) $\{a, b\}$

(f) $\{a \mapsto 1, b \mapsto 2, c \mapsto 3, d \mapsto 4\}$

(g) $\langle a, b \rangle$

(h) $\{3 \mapsto b\}$

(i) $\{a\}$

(j) c

Solution 38

(a)

$$\begin{array}{|l}
f : Place \rightarrow \mathbb{P}\, Place \\
\hline
\forall\, p : Place \bullet f(p) = \{q : Place \mid p \mapsto q \in \operatorname{ran} trains\}
\end{array}$$

(b) $\{p : Place \mid \exists_1\, x : \operatorname{dom} trains \bullet trains(x).2 = p\}$

(c) $\mu\, p : Place \bullet \forall\, q : Place \bullet p \neq q \wedge \#\{x : \operatorname{dom} trains \mid trains(x).2 = p\} > \#\{x : \operatorname{dom} trains \mid trains(x).2 = q\}$

Solution 39

(a)

$large\_coins : Collection \rightarrow N$

$\forall\, c : Collection \bullet large\_coins(c) = c(large)$

(Blocked by: underscore in identifier for fuzz compatibility)

(b)

$add\_coin : Collection * Coin \rightarrow Collection$

$\forall c\colon Collection \bullet \forall d\colon Coin \bullet add\_coin(c, d) = c \cup [\![d]\!]$

(Blocked by: underscore in identifier and bag union)

Modelling

Solutions 40-52 are work in progress - many require features not yet implemented

Solution 40

(Work in progress - requires semicolon-separated bindings in set comprehensions)

(a)

$hd : seq(Title * Length * Viewed)$

$cumulative\_total(hd) \leq 12000$

$\forall p\colon \mathrm{ran}\, hd \bullet p.2 \leq 360$

Note that cumulative$_t otalisdefinedinpart(d)$.

(b) $\{p\colon \mathrm{ran}\, hd \mid p.2 > 120 \bullet p.1\}$

(c)

These can be defined recursively:

$viewed : \mathrm{seq}\, Programme \rightarrow \mathrm{seq}\, Programme$

$viewed(\langle\rangle) = \langle\rangle \wedge \forall x\colon Programme \bullet \forall s\colon \mathrm{seq}\, Programme \bullet viewed(\langle x\rangle \frown s) = (\text{if } x.3 = yes \text{ then } \langle x\rangle \frown viewed(s) \text{ els}$

or otherwise (omitted - requires semicolon-separated bindings in set comprehension)

(d)

$cumulative\_total : \mathrm{seq}\, Title * Length * Viewed \rightarrow \mathbb{N}$

$cumulative\_total(\langle\rangle) = 0\, \forall x\colon Title * Length * Viewed \bullet \forall s\colon \mathrm{seq}\, Title * Length * Viewed \bullet cumulative\_total(\langle x\rangle \frown$

(e)

(mu p : $ranhd$ $|\forall q\colon \mathrm{ran}\, hd \bullet p \neq q \land p.2 > q.2|$ p.1)

(This, of course, assumes that there is a unique element with this property.)

(f)

(f) Omitted - requires semicolon-separated bindings in nested set comprehension

(g)

axdef

g : $seq(Title * Length * Viewed) \rightarrow seq(Title * Length * Viewed)$

where

$\forall s\colon \mathrm{seq}\ Title * Length * Viewed \bullet g(s) = s \rhd \{x\colon \mathrm{ran}\, s \mid x \neq longest\_viewed(s)\}$

end

Where longest$_v$$iewedisdefinedas$

axdef

$longest\_viewed : seq(Title * Length * Viewed)+ \rightarrow Title * Length * Viewed$

where

$\forall s\colon \mathrm{seq}\ Title * Length * Viewed \bullet longest\_viewed(s) = \mu\, p\colon \mathrm{ran}\, s \bullet p.3 = yes \land \forall q\colon \mathrm{ran}\, s \bullet p \neq q \land q.3 = yes \land p.2 > q.2$

end

This, of course, assumes that there is at least one viewed programme (and one of a unique maximum length).

(h)

s : seq $Title * Length * Viewed \rightarrow$ seq $Title * Length * Viewed$

$\forall x\colon \mathrm{seq}\ Title * Length * Viewed \bullet items(s(x)) = items(x) \land \forall i, j\colon \mathrm{dom}\, s(x) \bullet i < j \Rightarrow s(x)(i).2 \geq s(x)(j).2$

Solution 41

(a)

axdef

$records : Year \rightarrowtail\!\!\!\!\to$ Table

where

dom(records) = 1993..current

$\forall\, y\colon \mathrm{dom}\, records \bullet \#records(y) \leq 50$

$\forall\ y\ :\ dom(records)\ |\forall\, e\colon \mathrm{ran}\, records(y) \bullet year(e.1) = y$

$\forall\ r\ :\ ran(records)\ |\forall\, i1, i2\colon \mathrm{dom}\, r \bullet i1 \neq i2 \land r(i1).1 = r(i2).1 \Rightarrow r(i1).3 \neq r(i2).3$

end

(b)

(i) $\{e\colon Entry \mid \exists\, r\colon \mathrm{ran}\, records \bullet e \in \mathrm{ran}\, r \land e.3 = 479\}$
ii
$\{e\colon Entry \mid \exists\, r\colon \mathrm{ran}\, records \bullet e \in \mathrm{ran}\, r \land e.6 > e.5\}$
iii
$\{e\colon Entry \mid \exists\, r\colon \mathrm{ran}\, records \bullet e \in \mathrm{ran}\, r \land e.7 \geq 70\}$
iv
$\{c\colon Course \mid \forall\, r\colon \mathrm{ran}\, records \bullet \forall\, e\colon \mathrm{ran}\, r \bullet e.2 = c \Rightarrow e.7 \geq 70\}$
v

$\{y\colon Year \mid y \in \mathrm{dom}\, records \bullet y \mapsto \{l\colon Lecturer \mid \#\{c\colon \mathrm{ran}\, records(y) \mid c.4 = l\} > 6\}\}$

(c)

axdef

where

$\forall\, x\colon Entry \bullet \forall\, s\colon \mathrm{seq}\, Entry \bullet 479\_courses(\langle\rangle) = \langle\rangle$ and $479_c ourses(\langle x\rangle\ ^s) = if x.3 = 479 then \langle x\rangle\ ^4 79_c ourses(s) else 479_c ours$

end

(Blocked by: underscore in identifier - use camelCase for fuzz compatibility)

(d)

$\forall x \colon Entry \bullet \forall s \colon \mathrm{seq}\, Entry \bullet total(\langle\rangle) = 0 \land total(\langle x \rangle \frown s) = x.5 + total(s)$

Solution 42

$[Person]$

axdef

$State$: $P(seq(iseq(Person)))$

where

$\forall$ s : $State$ $|\forall i, j \colon \mathrm{dom}\, s \bullet i \neq j \land \mathrm{ran}\, s(i) \cap \mathrm{ran}\, s(j) = \{\}$

end

(b)

axdef

add : $N * Person * State \rightarrowtail\!\!\!\!\rightarrow$ State

where

$\forall n \colon \mathbb{N} \bullet \forall p \colon Person \bullet \forall s \colon State \bullet n \in \mathrm{dom}\, s \land p \notin \bigcup \mathrm{ran}\, \mathrm{ran}\, s|$

add(n, p, s) = s ++ n $\mapsto$ s(n) $\langle p \rangle$

end

(Blocked by: $\rightarrowtail\!\!\!\!\rightarrow$ operator not implemented)

Solution 43

(a)

(i) $\forall$ i : $dombookings$ $|\forall x, y \colon bookings(i) \bullet x \neq y \land x.2 \ldots x.3 \cap y.2 \ldots y.3 = \{\}$

(ii) $\forall$ i : $dombookings$ $|\forall$ x : $bookings(i)|$ $\{x.2, x.3\}$ subseteq 1..max(i.1)

(iii) $\forall\ i : dombookings\ |\forall\ b\colon bookings(i) \bullet b.2 \leq b.3$

(iv) This is enforced by the constraint for part (i).

(b)

(i) $\{i\colon \mathrm{dom}\, bookings \mid i.1 = Banbury \bullet i.2\}$

(ii) $\{i\colon \mathrm{dom}\, bookings \mid i.1 = Banbury \wedge \exists\, b\colon bookings(i) \bullet 50 \in b.2 \mathbin{..} b.3\}$

(iii) $r : Room;\ s : N\ |\exists\, i\colon \mathrm{dom}\, bookings \bullet i.1 = r \wedge i.2 = s.$ (r, s)

(iv) $\{r\colon Room \mid \exists\, i\colon \mathrm{dom}\, bookings \bullet i.1 = r \wedge \#bookings(i) \geq 10\}$

Free types and induction

$[N]$

$Tree ::= stalk \mid leaf\langle\!\langle \mathbb{N} \rangle\!\rangle \mid branch\langle\!\langle Tree \times Tree \rangle\!\rangle$

Solution 44

The two cases of the proof are established by equational reasoning: the first by

reverse $(\langle\rangle\ ^t) = reverset[cat.1a] = (reverset)\langle\rangle$ [cat.1b]

where cat.1a is $\langle\rangle$ s = s$andcat.1biss\langle\rangle =$ s

and the second by

reverse $((\langle x \rangle\ ^u)^t) = reverse(\langle x \rangle\ ^(u^t))[cat.2]$

= reverse (u $^t)\langle x \rangle$ [reverse.2]

= (reverse t $^r everseu)\langle x \rangle$ [anti-distributive]

= reverse t $^(reverseu\langle x \rangle)$ [cat.2]

= reverse t $^r everse(\langle x \rangle\ ^u)[reverse.2]$

Solution 45

The base case:

reverse (reverse $\langle\rangle$) = reverse $\langle\rangle$ [reverse.1] = $\langle\rangle$ [reverse.1]

The inductive step:

reverse (reverse $(\langle x \rangle\ ^t)$)

= reverse ((reverse t) $\langle x \rangle$) [reverse.2]

= reverse $(\langle x \rangle)\ ^r everse(reverset)[anti - distributive]$

= reverse $(\langle x \rangle\ \langle\rangle)\ ^r everse(reverset)[cat.1]$

= ((reverse $\langle\rangle$) $\langle x \rangle)\ ^r everse(reverset)[reverse.2]$

= $(\langle\rangle\ \langle x \rangle)\ ^r everse(reverset)[reverse.1]$

= $\langle x \rangle\ ^r everse(reverset)[cat.1]$

= $\langle x \rangle\ ^t[reverse(reverset) = t]$

Solution 46

(a)

$count : Tree \to N$

count $stalk = 0$

$\forall\, n{:}\, \mathbb{N} \bullet count(leaf(n)) = 1$

$\forall\, t1, t2{:}\; Tree \bullet count(branch(t1, t2)) = count(t1) + count(t2)$

(Blocked $by : recursivefreetypesandpatternmatching$)

(b)

$flatten : Tree \to seqN$

flatten stalk $= \langle\rangle$

$\forall\, n{:}\, \mathbb{N} \bullet flatten(leaf(n)){=}\ \langle n \rangle$

$\forall\, t1, t2{:}\; Tree \bullet flatten(branch(t1, t2)) = flatten(t1^{flatten})(t2)$

(Blocked $by : recursivefreetypesandpatternmatching$)

Solution 47

First, exhibit the induction principle for the free type:

P stalk and $(\forall\, n{:}\, \mathbb{N} \bullet \mathbb{P}\, leaf(n))$ and $\forall\, t1, t2{:}\; Tree \bullet \mathbb{P}\, t1 \wedge \mathbb{P}\, t2 \Rightarrow \mathbb{P}\, branch(t1, t2)$

implies $\forall\, t{:}\; Tree \bullet \mathbb{P}\, t$

This gives three cases for the proof:

(flatten stalk) $=\ \langle\rangle$ [flatten] $= 0$ [] $=$ count stalk [count]

(Remaining cases omitted - require equational reasoning with recursive functions)

Supplementary material : assignment practice

Solution 48

$[SongId, UserId, PlaylistId, Playlist]$

$$\begin{array}{|l}
songs : \mathbb{F}\ SongId \\
users : \mathbb{F}\ UserId \\
playlists : PlaylistId \nrightarrow Playlist \\
playlistOwner : PlaylistId \nrightarrow UserId \\
playlistSubscribers : PlaylistId \nrightarrow \mathbb{F}_1\ UserId \\
\hline
\forall\, i\colon \mathrm{dom}\, playlists \bullet \mathrm{ran}\, playlists(i)(subseteq)(songs)\ \mathrm{dom}\, playlistOwner(subseteq)(\mathrm{dom}\, playlists)\ \mathrm{ran}\, playlistOwner(
\end{array}$$

Solution 49

$$\begin{array}{|l}
hated : UserId \nrightarrow \mathbb{F}\ SongId \\
loved : UserId \nrightarrow \mathbb{F}\ SongId \\
\hline
\mathrm{dom}\, hated(subseteq)(users)\ \forall\, i\colon \mathrm{dom}\, hated \bullet hated(i)(subseteq)(songs)\ \mathrm{dom}\, loved(subseteq)(users)\ \forall\, i\colon \mathrm{dom}\, loved \bullet
\end{array}$$

Solution 50

(a)

$$A == users \setminus \bigcup \mathrm{ran}\, playlistSubscribers$$

(b)

$$B == \{p\colon \mathrm{dom}\, playlistSubscribers \mid \#playlistSubscribers(p) \geq 100\}$$

(c)

$$C == \mu\, u\colon \mathrm{dom}\, loved \bullet \forall\, v\colon \mathrm{dom}\, loved \bullet u \neq v \land \#loved(u) > \#loved(v)$$

(d)

$$D == \mu\, s\colon songs \bullet \forall\, t\colon songs \bullet s \neq t \land \#\{u\colon UserId \mid s \in loved(u)\} > \#\{u\colon UserId \mid t \in loved(u)\}$$

Solution 51

(a)

Let's first define two helper functions:

$loveHateScore : SongId + \rightarrow N$

$\forall\ i : songs \mid \{u\colon UserId \mid i \in loved(u)\} \geq\ \{u\colon UserId \mid i \in hated(u)\} \Rightarrow$

loveHateScore(i) = $\{u\colon UserId \mid i \in loved(u)\}$ - $\{u\colon UserId \mid i \in hated(u)\}$

and

$\forall\ i : songs \mid \{u\colon UserId \mid i \in loved(u)\} <\ \{u\colon UserId \mid i \in hated(u)\} \Rightarrow$

loveHateScore(i) = 0

$$
\begin{array}{|l}
playlistCount : SongId \nrightarrow \mathbb{N} \\
\hline
\forall\, i\colon songs \bullet playlistCount(i) = \#\{p\colon \mathrm{dom}\, playlist \mid i \in \mathrm{ran}\, playlist(p)\}
\end{array}
$$

We then have:

$$
\begin{array}{|l}
length : SongId \nrightarrow \mathbb{N} \\
popularity : SongId \nrightarrow \mathbb{N} \\
\hline
\mathrm{dom}\, length(subseteq)(songs)\ \mathrm{dom}\, popularity(subseteq)(songs)\ \forall\, i\colon songs \bullet popularity(i) = loveHateScore(i) + playl
\end{array}
$$

(b)

$mostPopular : SongId$

$(\exists_1\ i : songs \mid \forall\, j\colon songs \bullet i \neq j \wedge popularity(i) > popularity(j)) \Rightarrow$

mostPopular = (mu $i : songs \mid \forall\, j\colon songs \bullet i \neq j \wedge popularity(i) > popularity(j)$)

and

$\neg\ \exists_1\ i\colon songs \bullet \forall\, j\colon songs \bullet i \neq j \wedge popularity(i) > popularity(j) \Rightarrow mostPopular = nullSong$

(c) playlistsContainingMostPopularSong == $\{i\colon \mathrm{dom}\, playlists \mid mostPopular \in \mathrm{ran}\, playlists(i)\}$

Solution 52

(a)

$premiumPlays : seq(Play) \rightarrow seq(Play)$

premiumPlays($\langle\rangle$) = $\langle\rangle$

$\forall\ x : Play;\ s : seq(Play) \mid$

premiumPlays($\langle x\rangle\ ^{s}$) =$\langle x\rangle\ ^{p} remiumPlays(s) if userStatus(x.2) = premium$

premiumPlays(s) if userStatus(x.2) = standard

(Note: Uses camelCase for fuzz compatibility)

(b)

$standardPlays : seq(Play) \to seq(Play)$

standardPlays($\langle\rangle$) = $\langle\rangle$

$\forall\ x : Play;\ s : seq(Play) \mid$

standardPlays($\langle x \rangle\ ^s$) =$\langle x \rangle\ ^s tandardPlays(s) if userStatus(x.2) = standard$

standardPlays(s) if userStatus(x.2) = premium

(Note: Uses camelCase for fuzz compatibility)

(c)

$cumulativeLength : seq(Play) \to N$

cumulativeLength($\langle\rangle$) = 0

$\forall\ x : Play;\ s : seq(Play) \mid$

cumulativeLength($\langle x \rangle\ ^s$) = $length(x.1) + cumulativeLength(s)$

(Note: Uses camelCase for fuzz compatibility)
