

## Phase 11 . 9 : Generic Type Instantiation

### Example 1 : Basic Generic Instantiation

- (a)  $[\mathbb{N}]$
- (b)  $seq[\mathbb{N}]$
- (c)  $P[X]$

### Example 2 : Complex Type Parameters

- (a)  $[\mathbb{N} \times \mathbb{N}]$
- (b)  $P[X]$
- (c)  $seq[\mathbb{N} \times \mathbb{N}]$

### Example 3 : Multiple Type Parameters

- (a)  $Type[A, B]$
- (b)  $Container[X, Y, \mathbb{Z}]$

### Example 4 : Nested Generic Instantiation

- (a)  $Type[List[\mathbb{N}]]$
- (b)  $Container[seq[\mathbb{N}]]$

### Example 5 : Chained Generic Instantiation

- (a)  $Type[\mathbb{N}][M]$

### Example 6 : Generic Types in Expressions

- (a)  $x \in Type[\mathbb{N}]$
- (b)  $A \subseteq P[X]$
- (c)  $[\mathbb{N}] \cup \{x\}$

### Example 7 : Generic Types in Set Comprehensions

- (a)  $\{s : P[\mathbb{N}] \mid s = [\mathbb{N}]\}$
- (b)  $\{x : seq[\mathbb{N}] \mid \#x > 0\}$
