

# Propositional logic

## Solution 1

(a)

$$\text{false}(\text{as}(\text{true} \Rightarrow \text{false}) \Leftrightarrow \text{false})$$

(b)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{false}) \Leftrightarrow \text{true})$$

(c)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{true}) \Leftrightarrow \text{true})$$

(d)

$$\text{true}(\text{as}(\text{false} \Rightarrow \text{false}) \Leftrightarrow \text{true})$$

(Assuming that pigs can't fly . . . )

## Solution 2

(a)

$p$	$q$	$p \wedge q$	$(p \wedge q) \Rightarrow p$
t	t	t	t
t	f	f	t
f	t	f	t
f	f	f	t

(b)

$p$	$q$	$p \wedge q$	$\neg p$	$\neg p \Rightarrow (p \wedge q)$	$(\neg p \Rightarrow (p \wedge q)) \Leftrightarrow p$
t	t	t	f	t	t
t	f	f	f	t	t
f	t	f	t	f	t
f	f	f	t	f	t

(c)

$p$	$q$	$p \Rightarrow q$	$p \wedge (p \Rightarrow q)$	$(p \wedge (p \Rightarrow q)) \Rightarrow q$
t	t	t	t	t
t	f	f	f	t
f	t	t	f	t
f	f	t	f	t

### Solution 3

(a)

$$\begin{aligned}
 p \Rightarrow \neg p & \\
 \Leftrightarrow \neg p \vee \neg p & \quad [\Rightarrow] \\
 \Leftrightarrow \neg p & \quad [\text{idempotence}]
 \end{aligned}$$

(b)

$$\begin{aligned}
 \neg p \Rightarrow p & \\
 \Leftrightarrow \neg \neg p \vee p & \quad [\Rightarrow] \\
 \Leftrightarrow p \vee p & \quad [\neg \neg] \\
 \Leftrightarrow p & \quad [\text{idempotence}]
 \end{aligned}$$

(c)

$$\begin{aligned}
 p \Rightarrow (q \Rightarrow r) & \\
 \Leftrightarrow \neg p \vee (q \Rightarrow r) & \quad [\Rightarrow] \\
 \Leftrightarrow \neg p \vee \neg q \vee r & \quad [\Rightarrow] \\
 \Leftrightarrow \neg p \vee \neg q \vee r & \quad [\text{associativity}] \\
 \Leftrightarrow \neg(p \wedge q) \vee r & \quad [\text{De Morgan}] \\
 \Leftrightarrow p \wedge q \Rightarrow r & \quad [\Rightarrow]
 \end{aligned}$$

(d)

$$\begin{aligned}
 q \Rightarrow (p \Rightarrow r) & \\
 \Leftrightarrow \neg q \vee (p \Rightarrow r) & \quad [\Rightarrow] \\
 \Leftrightarrow \neg q \vee \neg p \vee r & \quad [\Rightarrow] \\
 \Leftrightarrow \neg p \vee \neg q \vee r & \quad [\text{associativity} \wedge \text{commutativity}] \\
 \Leftrightarrow \neg p \vee (q \Rightarrow r) & \quad [\Rightarrow] \\
 \Leftrightarrow p \Rightarrow (q \Rightarrow r) & \quad [\Rightarrow]
 \end{aligned}$$

(e)

$$\begin{aligned} p \wedge q &\Leftrightarrow p \\ &\Leftrightarrow (p \wedge q \Rightarrow p) \wedge (p \Rightarrow p \wedge q) & [\Leftrightarrow] \\ &\Leftrightarrow (\neg(p \wedge q) \vee p) \wedge (\neg p \vee p \wedge q) & [\Rightarrow] \\ &\Leftrightarrow (\neg p \vee \neg q \vee p) \wedge (\neg p \vee p \wedge q) & [\text{De Morgan}] \\ &\Leftrightarrow (\neg q \vee \neg p \vee p) \wedge (\neg p \vee p \wedge q) & [\text{associativity} \wedge \text{comm .}] \\ &\Leftrightarrow (\neg q \vee \text{true}) \wedge (\neg p \vee p \wedge q) & [\text{excluded middle}] \\ &\Leftrightarrow \text{true} \wedge (\neg p \vee p \wedge q) & [\vee \wedge \text{true}] \\ &\Leftrightarrow \neg p \vee p \wedge q & [\wedge \wedge \text{true}] \\ &\Leftrightarrow (\neg p \vee p) \wedge (\neg p \vee q) & [\text{distribution}] \\ &\Leftrightarrow \text{true} \wedge (\neg p \vee q) & [\text{excluded middle}] \\ &\Leftrightarrow \neg p \vee q & [\wedge \wedge \text{true}] \\ &\Leftrightarrow p \Rightarrow q & [\Rightarrow] \end{aligned}$$

(f)

$$\begin{aligned} p \vee q &\Leftrightarrow p \\ &\Leftrightarrow (p \vee q \Rightarrow p) \wedge (p \Rightarrow p \vee q) & [\Leftrightarrow] \\ &\Leftrightarrow (\neg(p \vee q) \vee p) \wedge (\neg p \vee p \vee q) & [\Rightarrow] \\ &\Leftrightarrow (\neg p \wedge \neg q \vee p) \wedge (\neg p \vee p \vee q) & [\text{De Morgan}] \\ &\Leftrightarrow (\neg p \vee p) \wedge (\neg q \vee p) \wedge (\neg p \vee p \vee q) & [\text{distribution}] \\ &\Leftrightarrow \text{true} \wedge (\neg q \vee p) \wedge (\neg p \vee p \vee q) & [\text{excluded middle}] \\ &\Leftrightarrow (\neg q \vee p) \wedge (\neg p \vee p \vee q) & [\wedge \wedge \text{true}] \\ &\Leftrightarrow (\neg q \vee p) \wedge (\neg p \vee p \vee q) & [\text{associativity}] \\ &\Leftrightarrow (\neg q \vee p) \wedge (\text{true} \vee q) & [\text{excluded middle}] \\ &\Leftrightarrow (\neg q \vee p) \wedge \text{true} & [\vee \wedge \text{true}] \\ &\Leftrightarrow \neg q \vee p & [\wedge \wedge \text{true}] \\ &\Leftrightarrow q \Rightarrow p & [\Rightarrow] \end{aligned}$$

#### Solution 4

(a)  $(p \text{ or } q) \Leftrightarrow ((\text{not } p \text{ or not } q) \text{ and } q)$  is not a tautology. You might illustrate this via a truth table or via a chain of equivalences, showing that the proposition is not equivalent to true. Alternatively, you might try and find a combination of values for which the proposition is false. (In this case, the proposition is false when  $p$  and  $q$  are both true.)

(b)  $(p \text{ or } q) \Leftrightarrow ((\text{not } p \text{ and not } q) \text{ or } q)$  is not a tautology. In this case, the proposition is false when  $p$  is true and  $q$  is false.

### Solution 5

(a)

$$\exists d: Dog \bullet \text{gentle}(d) \wedge \text{well_rained}(d)$$

(b)

$$\forall d: Dog \bullet \text{neat}(d) \wedge \text{well_rained}(d) \Rightarrow \text{attractive}(d)$$

(c)

(Requires nested quantifier in implication - parser limitation)

### Solution 6

(a)

This is a true proposition: whatever the value of  $x$ , the expression  $x^2 - x + 1$  denotes a natural number. If we choose  $y$  to be this natural number, we will find that  $p$  is true.

(b)

This is a false proposition. We cannot choose a large enough value for  $y$  such that  $p$  will hold for any value of  $x$ .

(c)

This is a false proposition. It is an implication whose antecedent part is true and whose consequent part is false.

(d)

This is a true proposition. It is an implication whose antecedent part is false and whose consequent part is true.

**Solution 7**

(a)

We must define a predicate p that is false for at least one value of x, and is true for at least one other value. A suitable solution would be  $p \Leftrightarrow x \neq 1$ .

(b)

With the above choice of p, we require only that q is sometimes false when p is true (for else the universal quantification would hold). A suitable solution would be  $q \Leftrightarrow x \neq 3$ .

**Solution 8**

(a)

$$\forall x: N \bullet x \geq z$$

**Equality****Solution 9**

(d)

$$\begin{aligned}
 \exists x: N \bullet x = 1 \wedge x > y \vee x = 2 \wedge x > z \\
 &\Leftrightarrow \exists x: N \bullet x = 1 \wedge x > y \vee \exists x: N \bullet x = 2 \wedge x > z \\
 &\Leftrightarrow 1 \in N \wedge 1 > y \vee \exists x: N \bullet x = 2 \wedge x > z \\
 &\Leftrightarrow 1 \in N \wedge 1 > y \vee 2 \in N \wedge 2 > z \\
 &\Leftrightarrow 1 > y \vee 2 > z
 \end{aligned}$$

**Solution 10**

As discussed, the quantifier exists<sub>1</sub> can help give rise to a 'test' or 'precondition' to ensure that an application of mu will work.

So, as a simple example, as the proposition

$$\exists_1 n: N \bullet \forall m: N \bullet n \leq m$$

is equivalent to true, we can be certain that the statement

$$\mu n: N \bullet \forall m: N \bullet n \leq m$$

will return a result (which happens to be 0).

### Solution 11

(a)

$(\mu a: N \bullet a = a) = 0$  is a provable statement, since 0 is the only natural number with the specified property.

(b)

$(\mu b: N \bullet b = b) = 1$  is not provable. The specified property is true of both 0 and 1, and thus the value of the mu-expression is undefined.

(c)

$(\mu c: N \bullet c > c) = (\mu c: N \bullet c > c)$  is a provable statement. Neither expression is properly defined, but we may conclude that they are equal; there is little else that we can prove about them.

(d)

$(\mu d: N \bullet d = d) = 1$  is not a provable statement. We cannot confirm that 1 is the only natural number with the specified property; we do not know what value is taken by undefined operations.

### Solution 12

(Requires mu-operator with expression part - not yet implemented)

(a)

$$\mu m: Mountain \mid \forall n: Mountain \bullet height(n) \leq height(m) \bullet height(m)$$

(b)

$$\mu c : \text{Chapter} \mid \exists_1 d : \text{Chapter} \bullet \text{length}(d) > \text{length}(c) \bullet \text{length}(c)$$

(c)

Assuming the existence of a suitable function, max:  $(\mu n : N \bullet n = \max(\{m : N \mid 8 * m < 100.8 * m\}) . 100 - n)$

## Deductive proofs

### Solution 13

$$\frac{\frac{\frac{p \wedge (p \Rightarrow q)}{p} [\wedge\text{-elim}^{[1]}] \quad \frac{p \wedge (p \Rightarrow q)}{p} [\wedge\text{-elim}^{[1]}]}{q} [\Rightarrow\text{ elim}]}{p \wedge q} [\wedge\text{ intro}]$$

$$\frac{\neg(p \wedge (p \Rightarrow q))^{[1]}}{p \wedge (p \Rightarrow q) \Rightarrow p \wedge q} [\Rightarrow\text{-intro}^{[1]}]$$

### Solution 14

In one direction:

$$\frac{\frac{\frac{\frac{\overline{p \wedge q}}{p \wedge q} [\text{derived}] \quad \frac{\overline{p \wedge q}}{p \wedge q} [\Rightarrow\text{ elim from } 1 \wedge 2]}{\frac{\neg p^{[2]} \quad \frac{\overline{p \wedge q}}{q} [\wedge\text{-elim}^{[3]}]}{p \Rightarrow q} [\Rightarrow\text{-intro}^{[2]}]}{(p \wedge q \Leftrightarrow p)^{[1]}} \frac{\neg p^{[2]}}{p \Rightarrow q} [\Rightarrow\text{-intro}^{[1]}]}{(p \wedge q \Leftrightarrow p) \Rightarrow (p \Rightarrow q)}$$

and the other:

$$\frac{\frac{\frac{\neg p \wedge q^{[2]} \quad \neg p^{[2]}}{p \wedge q \Rightarrow p} [\Rightarrow\text{-intro}^{[2]}] \quad \frac{\neg p^{[3]} \quad \neg p \wedge q^{[1]}}{p \Rightarrow p \wedge q} [\Rightarrow\text{-intro}^{[3]}]}{p \wedge q \Leftrightarrow p} [\Leftrightarrow\text{ intro}]}{(p \Rightarrow q) \Rightarrow (p \wedge q \Leftrightarrow p)} [\Rightarrow\text{-intro}^{[1]}]$$

We can then combine these two proofs with  $\Leftrightarrow$  intro.

### Solution 15

$$\frac{\frac{\frac{\neg p \Rightarrow q^{\neg[1]} \quad \neg p^{\neg[2]}}{q} [\Rightarrow \text{ elim}] \quad \neg \neg q^{\neg[1]}}{false} [\text{false intro}]}{\frac{\neg p^{\neg[2]}}{\neg p} [\neg \neg \text{ elim}^{[2]}]} [\neg \neg \text{ intro}^{[1]}]$$

## Solution 16

In one direction:

$\frac{\vdash p \neg [1] \quad \overline{r} \quad [\text{case assumption}]}{p \wedge r} \quad [\wedge \text{ intro}]$	
$\frac{\vdash p \neg [1] \quad \overline{q} \quad [\text{case assumption}]}{p \wedge q} \quad [\wedge \text{ intro}]$	$\frac{}{p \wedge q \vee p \wedge r} \quad [\vee \text{ intro}]$
$\frac{\vdash p \wedge q \vee p \wedge r}{p \wedge q \vee p \wedge r} \quad [\vee \text{ intro}]$	
$\frac{\vdash q \vee r \neg [1]}{p \wedge q \vee p \wedge r}$	
$\frac{\vdash p \wedge (q \vee r) \neg [1] \quad \frac{}{p \wedge q \vee p \wedge r} \quad [\Rightarrow\text{-intro}^{[1]}]}{p \wedge (q \vee r) \Rightarrow p \wedge q \vee p \wedge r} \quad [\neg\text{-elim}^{[2]}]$	

In the other:

$\frac{}{p} [\wedge \text{ elim}]$	$\frac{}{q \vee r} [\vee \text{ intro}]$
$\frac{}{p} [\wedge \text{ elim}]$	$\frac{}{p \wedge (q \vee r)} [\wedge \text{ intro}]$
$\frac{}{q \vee r} [\vee \text{ intro}]$	
$\frac{}{p \wedge (q \vee r)} [\wedge \text{ intro}]$	
$\frac{\neg case1 \vee case2}{p \wedge (q \vee r)} [\neg \text{ elim}^{[3]}]$	$\frac{}{p \wedge (q \vee r)} [\Rightarrow \text{-intro}^{[3]}]$
$\frac{\neg case1 \vee case2}{p \wedge q \vee p \wedge r \Rightarrow p \wedge (q \vee r)} [\neg \text{ elim}^{[3]}]$	$\frac{}{p \wedge q \vee p \wedge r \Rightarrow p \wedge (q \vee r)} [\vee \text{-elim}^{[4]}]$

## Solution 17

In one direction:

$$\frac{\vdash p \vee q \wedge r \neg [3] \quad \overline{(p \vee q) \wedge (p \vee r)}}{p \vee q \wedge r \Rightarrow (p \vee q) \wedge (p \vee r)} [\neg \text{intro}^{[3]}]$$

and the other:

$$\frac{\vdash (p \vee q) \wedge (p \vee r) \neg^{[1]} \quad \vdash p \vee q \wedge r \neg^{[2]}}{(p \vee q) \wedge (p \vee r) \Rightarrow p \vee q \wedge r} [\Rightarrow\text{-intro}^{[1]}]$$

## Solution 18

In one direction:

$$\frac{\lceil p \Rightarrow q \neg^{[1]} \quad \neg p \vee q}{(p \Rightarrow q) \Rightarrow \neg p \vee q} [\Rightarrow\text{-intro}^{[1]}]$$

and the other:

$$\frac{\neg \neg p \vee q \neg [3]}{\neg p \vee q \Rightarrow (p \Rightarrow q)} \frac{\neg p \neg [4] \quad \neg q \neg [3]}{p \Rightarrow q} [\Rightarrow\text{-intro}^{[4]}] [\Rightarrow\text{-intro}^{[3]}]$$

## Sets and types

### Solution 19

(a)

1 in 4, 3, 2, 1 is true.

(b)

1 in 1, 2, 3, 4 is undefined.

(c)

1 in 1, 2, 3, 4 is true.

(d)

The empty set in 1, 2, 3, 4 is undefined.

### Solution 20

(a)

$\{1\} \times \{2, 3\}$

is the set (1, 2), (1, 3)

(b)

The empty set cross 2, 3 is the empty set

(c)

$\mathbb{P} \ emptyset \times \{1\}$

is the set (emptyset, 1)

(d)

(1, 2) cross 3, 4 is the set ((1, 2), 3), ((1, 2), 4)

### Solution 21

There are various ways of describing these sets via set comprehensions. Examples are given below.

(a)

$$\{z : Z \mid 0 \leq z \wedge z \leq 100\}$$

(b)

$$\{z : Z \mid z = 10\}$$

(c)

$$\{z : Z \mid z \bmod 2 = 0 \vee z \bmod 3 = 0 \vee z \bmod 5 = 0\}$$

### Solution 22

(a)

$$\{n : N \mid n \leq 4 \bullet n^2\}$$

(b)

$$\{n : N \mid n \leq 4 \bullet (n, n^2)\}$$

(c)

n : P 0, 1

(d)

n : P 0, 1 — true . (n, n)

### Solution 23

(a)

$$\begin{aligned}
x \in a \cap a \\
\Leftrightarrow x \in a \wedge x \in a \\
\Leftrightarrow x \in a
\end{aligned}$$

(b)

$$\begin{aligned}
x \in a \cup a \\
\Leftrightarrow x \in a \vee x \in a \\
\Leftrightarrow x \in a
\end{aligned}$$

### Solution 24

(a)

The set of all pairs of integers is  $\mathbb{Z}$  cross  $\mathbb{Z}$ . To give it a name, we could write:

Pairs ==  $\mathbb{Z} \times \mathbb{Z}$

(b)

The set of all integer pairs in which each element is strictly greater than zero could be defined by:

StrictlyPositivePairs == { m, n :  $\mathbb{Z}$  |  $m > 0 \wedge n > 0 \bullet (m, n)$  }

(c)

It is intuitive to use a singular noun for the name of a basic type; we define the set of all people by writing:

`[Person]`

(d)

The set of all couples could be defined by:

Couples == { s :  $\mathbb{P} Person$  |  $\#s = 2$  }

## Solution 25

(Requires generic set notation and Cartesian product)

### Solution 26

(Requires generic parameters and relation type notation)

## Relations

## Solution 27

(a)

The power set of  $(0,0)$ ,  $(0,1)$ ,  $(1,0)$ ,  $(1,1)$  is:

(b)  $\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}, \{(1,0), (1,1)\}, \{(0,0), (0,1)\}, \{(0,1), (1,1)\}, \{(0,1), (1,0)\}, \{(0,$

$\{\emptyset, \{(0, 0)\}, \{(0, 1)\}, \{(0, 0), (0, 1)\}\}$

(c)

$\{\emptyset\}$

(d)

$\{\emptyset\}$

### Solution 28

(a)

$$\text{dom } R = \{0, 1, 2\}$$

(b)

$$\text{ran } R = \{1, 2, 3\}$$

(c)

$$\{1, 2\} \lhd R = \{1 \mapsto 2, 1 \mapsto 3, 2 \mapsto 3\}$$

**Solution 29**

(a)

$$\{2 \mapsto 4, 3 \mapsto 3, 3 \mapsto 4, 4 \mapsto 2\}$$

(b)

$$\{1 \mapsto 3, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 1\}$$

(c)

$$\{1 \mapsto 1, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 4\}$$

(d)

$$\{1 \mapsto 4, 2 \mapsto 2, 2 \mapsto 3, 3 \mapsto 2, 3 \mapsto 3, 4 \mapsto 1\}$$

**Solution 30**

$$| \quad childOf : Person \leftrightarrow Person$$

(a)

$$\text{parentOf} == \text{childOf}^{-1}$$

This is a good example of how there are many different ways of writing the same thing. An alternative abbreviation is:

$$\text{parentOf} == \{ x, y : Person \mid x \mapsto y \in \text{childOf} \bullet y \mapsto x \}$$

Or, via an axiomatic definition:

$$\frac{| \quad parentOf : Person \leftrightarrow Person}{| \quad parentOf = \text{childOf}^{-1}}$$

(b)

$$\text{siblingOf} == (\text{childOf} \circ \text{parentOf}) \setminus id$$

(c)

$$\text{cousinOf} == \text{childOf} \circ \text{siblingOf} \circ \text{parentOf}$$

(d)

$$\text{ancestorOf} == \text{parentOf}^+$$

### Solution 31

(Requires compound identifiers with operators - R+, R\*)

(a)

$$R == \{ a, b : N \mid b = a \vee b = a \}$$

(b)

$$S == \{ a, b : N \mid b = a \vee b = a \}$$

(c)

$$R+ == \{ a, b : N \mid b > a \}$$

(d)

$$R^* == \{ a, b : N \mid b \geq a \}$$

### Solution 32

(a)

$$\begin{aligned} x \mapsto y \in A \triangleleft B \triangleleft R \\ \Leftrightarrow x \in A \wedge x \mapsto y \in (B \triangleleft R) \\ \Leftrightarrow x \in A \wedge x \in B \wedge x \mapsto y \in R \\ \Leftrightarrow x \in A \cap B \wedge x \mapsto y \in R \\ \Leftrightarrow x \mapsto y \in A \cap B \triangleleft R \end{aligned}$$

(b)

$$\begin{aligned} x \mapsto y \in R \cup S \triangleright C \\ \Leftrightarrow x \mapsto y \in R \cup S \wedge y \in C \\ \Leftrightarrow (x \mapsto y \in R \vee x \mapsto y \in S) \wedge y \in C \\ \Leftrightarrow x \mapsto y \in R \wedge y \in C \vee x \mapsto y \in S \wedge y \in C \\ \Leftrightarrow x \mapsto y \in R \triangleright C \vee x \mapsto y \in S \triangleright C \\ \Leftrightarrow x \mapsto y \in (R \triangleright C) \cup (S \triangleright C) \end{aligned}$$

## Functions

### Solution 33

The set of 9 functions:

$$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,1)\}, \{(1,0)\}, \{(0,0), (1,1)\}, \{(0,1), (1,1)\}, \{(1,0), (0,0)\}, \{(0,1), (1,0)\}\}$$

The set of total functions:

$$\{\{(0,0), (1,1)\}, \{(0,1), (1,1)\}, \{(1,0), (0,0)\}, \{(0,1), (1,0)\}\}$$

The set of functions which are neither injective nor surjective:

$$\{\{(0,1), (1,1)\}, \{(0,0), (1,0)\}\}$$

The set of functions which are injective but not surjective:

$$\{\emptyset, \{(0,0)\}, \{(0,1)\}, \{(1,0)\}, \{(1,1)\}\}$$

There are no functions (of this type) which are surjective but not injective.

$$(e)$$

The set of bijective functions:

$$\{\{(0,0), (1,1)\}, \{(0,1), (1,0)\}\}$$

### Solution 34

$$(a)$$

$$\{1 \mapsto a, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$$

$$(b)$$

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto d\}$

(c)

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

(d)

$\{1 \mapsto c, 2 \mapsto b, 3 \mapsto c, 4 \mapsto b\}$

### Solution 35

(Requires power set notation P and relational image)

(a)

axdef

children : Person - $\hookrightarrow$  P Person

where

children = p : Person . p — $\hookrightarrow$  parentOf(— p —)

end

(b)

axdef

number\_of\_random\_children : Person —> N

where

number\_of\_random\_children = p : Person . p | —> (parentOf o parentOf)(| p |)

end

### Solution 36

(Requires power set, function types, and ran keyword)

axdef

number<sub>of</sub>rivers : (Drivers < -> Cars) -> (Cars -> N)

where

forall r : Drivers  $\vdash \ddot{c}$  Cars — number<sub>of</sub>rivers(r) = c : ranr.c | -> { d : Drivers | d  $\mapsto$  c  $\in$  r }

end

## Sequences

### Solution 37

(a)

$\langle a \rangle$

(b)

{1  $\mapsto$  a, 2  $\mapsto$  b, 2  $\mapsto$  a, 3  $\mapsto$  c, 3  $\mapsto$  b, 4  $\mapsto$  d}

(c)

{2  $\mapsto$  b, 3  $\mapsto$  c, 4  $\mapsto$  d}

(d)

{1, 2, 3, 4}

(e)

{a, b}

(f)

{a  $\mapsto$  1, b  $\mapsto$  2, c  $\mapsto$  3, d  $\mapsto$  4}

(g)

$\langle a, b \rangle$

(h)

$\{3 \mapsto b\}$

(i)

$\{a\}$

(j)

$c$

### Solution 38

(a)

$$\frac{| f : Place \rightarrow \mathbb{P} \text{ Place}}{\forall p : Place \bullet f(p) = \{q : Place \mid p \mapsto q \in \text{ran } \textit{trains}\}}$$

(b)

$\{p : Place \mid \exists_1 x : \text{dom } \textit{trains} \bullet \textit{trains}(x).2 = p\}$

(c)

(mu p : Place —  $\forall q : Place \bullet p \neq q$ —  $\{x : \text{dom } \textit{trains} \mid \textit{trains}(x).2 = p\}$  ;  
 $\{x : \text{dom } \textit{trains} \mid \textit{trains}(x).2 = q\}$ )

(Blocked by: nested quantifiers in mu with multiple pipes - parser ambiguity)

### Solution 39

(a)

$\text{large}_c oins : Collection \rightarrow N$

$\forall c : Collection \bullet \text{large}_c oins(c) = c(\text{large})$

(Blocked by: underscore in identifier for fuzz compatibility)

(b)

$\text{add}_{c\text{oin}} : \text{Collection} * \text{Coin} -> \text{Collection}$

$\forall c : \text{Collection} \bullet \forall d : \text{Coin} \bullet \text{add}_{c\text{oin}}(c, d) = c \cup \llbracket d \rrbracket$

(Blocked by: underscore in identifier and bag union)

## Modelling

Solutions 40-52 are work in progress - many require features not yet implemented

### Solution 40

(Work in progress - requires semicolon-separated bindings in set comprehensions)

(a)

$\text{hd} : \text{seq}(\text{Title} * \text{Length} * \text{Viewed})$

$\text{cumulative}_t \text{otalhd} <= 12000$

$\forall p : \text{ran } \text{hd} \bullet p.2 \leq 360$

Note that  $\text{cumulative}_t \text{otal}$  is defined in  $\text{part}(d)$ .

(b)

$\{p : \text{ran } \text{hd} \mid p.2 > 120 \bullet p.1\}$

(c)

These can be defined recursively:

viewed  $\text{if}_i = \text{if}_i$

viewed  $\text{if}_i^s = \text{if}x.3 = y \text{esthen} < x >^v \text{iewedselsevieweds}$

or otherwise (omitted - requires semicolon-separated bindings in set comprehension)

(d)

$$\frac{\text{cumulative}_t otal : \text{seq } Title * Length * Viewed \rightarrow N}{\text{cumulative}_t otal(\langle \rangle) = 0 \quad \forall x: Title * Length * Viewed \bullet \forall s: \text{seq } Title * Length * Viewed \bullet \text{cumulative}_t otal(s) = \text{if}_i^s}$$

(e)

$(\mu u p : \text{ran } \text{hd} — \forall q: \text{ran } \text{hd} \bullet p \neq q — p.2 \downarrow q.2 — p.1)$

(This, of course, assumes that there is a unique element with this property.)

(f)

(f) Omitted - requires semicolon-separated bindings in nested set comprehension

(g)

axdef

$g : \text{seq}(Title * Length * Viewed) \dashv_i \text{seq}(Title * Length * Viewed)$

where

$\forall s: \text{seq } Title * Length * Viewed \bullet g(s) = s —_i \{x: \text{ran } s \mid x \neq \text{longest}_v \text{iewed}(s)\}$

end

Where  $\text{longest}_{\text{viewed}}$  is defined as

axdef

$\text{longest}_{\text{viewed}} : \text{seq}(\text{Title} * \text{Length} * \text{Viewed}) + - > \text{Title} * \text{Length} * \text{Viewed}$

where

$\forall s : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \bullet \text{longest}_{\text{viewed}}(s) = (\mu p : \text{ran } s \bullet p.3 = \text{yes} \text{ and } \forall q : \text{ran } s \bullet p \neq q \wedge q.3 = \text{yes} \rightarrow p.2 \geq q.2)$

end

(Blocked by: nested quantifiers in mu expressions - parser limitation)

This, of course, assumes that there is at least one viewed programme (and one of a unique maximum length).

(h)

$$\boxed{\begin{array}{l} s : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \rightarrow \text{seq } \text{Title} * \text{Length} * \text{Viewed} \\ \forall x : \text{seq } \text{Title} * \text{Length} * \text{Viewed} \bullet \text{items}(s(x)) = \text{items}(x) \wedge \forall i, j : \text{dom } s(x) \bullet i < j \Rightarrow s(x)(i).2 \geq s(x)(j).2 \end{array}}$$

### Solution 41

(a)

axdef

records : Year — $\zeta$  Table

where

$\text{dom}(\text{records}) = 1993.. \text{current}$

$\forall y: \text{dom } \text{records} \bullet \#\text{records}(y) \leq 50$

forall  $y : \text{dom}(\text{records}) — \forall e: \text{ran } \text{records}(y) \bullet \text{year}(e.1) = y$

forall  $r : \text{ran}(\text{records}) — \forall i1, i2: \text{dom } r \bullet i1 \neq i2 \wedge r(i1).1 = r(i2).1 \Rightarrow r(i1).3 \neq r(i2).3$

end

(Blocked by: nested quantifiers in predicates - parser limitation)

(b)

(i)

$\{e: \text{Entry} \mid \exists r: \text{ran } \text{records} \bullet e \in \text{ran } r \wedge e.3 = 479\}$

*ii*

$\{e: \text{Entry} \mid \exists r: \text{ran } \text{records} \bullet e \in \text{ran } r \wedge e.6 > e.5\}$

*iii*

$\{e: \text{Entry} \mid \exists r: \text{ran } \text{records} \bullet e \in \text{ran } r \wedge e.7 \geq 70\}$

*iv*

$\{c: \text{Course} \mid \forall r: \text{ran } \text{records} \bullet \forall e: \text{ran } r \bullet e.2 = c \Rightarrow e.7 \geq 70\}$

*v*

$y : \text{Year} — y \text{ in } \text{dom } \text{records} . y —\zeta l : \text{Lecturer} — c : \text{ran}(\text{records } y) — c.4 = l \zeta 6$

(c)

axdef

where

$$\forall x: \text{Entry} \bullet \forall s: \text{seq Entry} \bullet 479_c \text{ourses}(<>) = <> \text{and} 479_c \text{ourses}(< x >^s) \\ ) = \text{if} x.3 = 479 \text{then } < x >^4 79_c \text{ourses}(s) \text{else} 479_c \text{ourses}(s)$$

end

(Blocked by: underscore in identifier - use camelCase for fuzz compatibility)

(d)

$$\boxed{\forall x: \text{Entry} \bullet \forall s: \text{seq Entry} \bullet \text{total}(\langle \rangle) = 0 \wedge \text{total}(\langle x \rangle \cap s) = x.5 + \text{total}(s)}$$

#### Solution 42

[Person]

axdef

State : P(seq(iseq(Person)))

where

forall s : State —  $\forall i, j: \text{dom } s \bullet i \neq j \text{— ran}(s(i)) \text{ intersect ran}(s(j)) =$

end

(Blocked by: nested quantifiers with semicolon bindings - parser limitation)

(b)

axdef

$\text{add} : N * \text{Person} * \text{State} \multimap \text{State}$

where

$\forall n: N \bullet \forall p: \text{Person} \bullet \forall s: \text{State} \bullet n \in \text{dom } s \wedge p \notin \text{bigcup}(\text{ran ran } s) \multimap$

$\text{add}(n, p, s) = s ++ n \multimap s(n) < p >$

end

(Blocked by:  $\multimap_i$  operator not implemented)

### Solution 43

(a)

(i) forall  $i : \text{dom bookings} \multimap \forall x, y: \text{bookings}(i) \bullet x \neq y \multimap (x.2..x.3) \text{ intersect } (y.2..y.3) =$

(ii) forall  $i : \text{dom bookings} \multimap \forall x: \text{bookings}(i) \bullet \{x.2, x.3\} \subseteq \{1..max(i.1)\}$

(iii) forall  $i : \text{dom bookings} \multimap \forall b: \text{bookings}(i) \bullet b.2 \leq b.3$

(iv) This is enforced by the constraint for part (i).

(Blocked by: nested quantifiers - parser limitation)

(b)

(i)  $\{i : \text{dom } bookings \mid i.1 = \text{Banbury} \bullet i.2\}$

(ii)  $i : \text{dom } bookings \mid i.1 = \text{Banbury} \text{ and } \exists b : bookings(i) \bullet 50 \in b.2 \dots b.3$

(iii)  $r : \text{Room}; s : N \mid \exists i : \text{dom } bookings \bullet i.1 = r \wedge i.2 = s. (r, s)$

(iv)  $r : \text{Room} \mid \exists i : \text{dom } bookings \bullet i.1 = r \text{ — } (\text{bookings}(i))_{i=10}$

(Blocked by: semicolon bindings in set comprehensions and nested quantifiers)

## Free types and induction

### Solution 44

The two cases of the proof are established by equational reasoning: the first by

$$\text{reverse}(\text{j}\text{l}^t) = \text{reverset}[cat.1a] = (\text{reverset})^{<} > [cat.1b]$$

$$\text{where cat.1a is j}\text{l}^s = \text{sandcat.1biss}^{<} > = s$$

and the second by

$$\text{reverse } ((\text{!x}_i \ u)^t) = \text{reverse}(< x >^t u^t)[\text{cat.2}]$$

$$= \text{reverse } (\text{u }^t)^{< x >} [\text{reverse.2}]$$

$$= (\text{reverse } t \ ^r \text{everse} u)^{< x >} [\text{anti-distributive}]$$

$$= \text{reverse } t \ (^r \text{everse} u^{< x >})[\text{cat.2}]$$

$$= \text{reverse } t \ ^r \text{everse}(< x >^u)[\text{reverse.2}]$$

### Solution 45

The base case:

$$\text{reverse } (\text{reverse } \text{!}i) = \text{reverse } \text{!}i [\text{reverse.1}] = \text{!}i [\text{reverse.1}]$$

The inductive step:

$$\text{reverse } (\text{reverse } (\text{!x}_i \ ^t))$$

$$= \text{reverse } ((\text{reverse } t)^{< x >})[\text{reverse.2}]$$

$$= \text{reverse } (\text{!x}_i \ ^r \text{everse}(\text{reverset}))[\text{anti-distributive}]$$

$$= \text{reverse } (\text{!x}_i \ ^{< >} \ ^r \text{everse}(\text{reverset}))[\text{cat.1}]$$

$$= ((\text{reverse } \text{!}i)^{< x >})^r \text{everse}(\text{reverset})[\text{reverse.2}]$$

$$= (\text{!}\zeta < x >)^r \text{everse}(\text{reverset})[\text{reverse.1}]$$

$$= \text{!}\mathbf{x}_\zeta^r \text{everse}(\text{reverset})[\text{cat.1}]$$

$$= \text{!}\mathbf{x}_\zeta^t [\text{reverse}(\text{reverset}) = t]$$

### Solution 46

(a)

$$\text{count} : \text{Tree} \dashv \zeta \text{ N}$$

$$\text{count stalk} = 0$$

$$\forall n : N \bullet \text{count}(\text{leaf } n) = 1$$

$$\forall t_1, t_2 : \text{Tree} \bullet \text{count}(\text{branch}(t_1, t_2)) = \text{count} t_1 + \text{count} t_2$$

(Blocked by: recursive free types and pattern matching)

(b)

$$\text{flatten} : \text{Tree} \dashv \zeta \text{ seq N}$$

$$\text{flatten stalk} = \text{!}\zeta$$

$$\forall n : N \bullet \text{flatten}(\text{leaf } n) = \text{!}\mathbf{n}_\zeta$$

$$\forall t_1, t_2 : \text{Tree} \bullet \text{flatten}(\text{branch}(t_1, t_2)) = \text{flatten} t_1 \text{ } f \text{ } \text{flatten} t_2$$

(Blocked by: recursive free types and pattern matching)

### Solution 47

First, exhibit the induction principle for the free type:

$P$  stalk and  $(\forall n: N \bullet P(\text{leaf } n))$  and  $(\forall t_1, t_2: Tree \bullet \mathbb{P} t_1 \wedge \mathbb{P} t_2 \Rightarrow \mathbb{P} \text{ branch}(t_1, t_2))$

implies  $\forall t: Tree \bullet \mathbb{P} t$

This gives three cases for the proof:

(flatten stalk) =  $\text{if } [\text{flatten}] = 0 \text{ then } [] \text{ else count stalk [count]}$

(Remaining cases omitted - require equational reasoning with recursive functions)

## Supplementary material : assignment practice

### Solution 48

$[SongId, UserId, PlaylistId, Playlist]$

$$\frac{| songs : \mathbb{F} SongId \ users : \mathbb{F} UserId \ playlists : PlaylistId \rightarrow Playlist \ playlistOwner : PlaylistId \rightarrow UserId \ playlists : \mathbb{F} UserId \ playlists \bullet \ ran \ playlists(i) \ subseteq songs \ dom \ playlistOwners \ subseteq \ dom \ playlists \ ran \ playlists \ ran \ playlistOwner(i) |}{\forall i : \ dom \ playlists \bullet \ ran \ playlists(i) \ subseteq songs \ dom \ playlistOwners \ subseteq \ dom \ playlists \ ran \ playlists \ ran \ playlistOwner(i)}$$

### Solution 49

axdef

hated :  $UserId \dashv \vdash \mathbb{F} SongId$

$\text{loved} : \text{UserId} \dashv_{\mathcal{L}} \text{F SongId}$

where

$\text{dom}(\text{hated}) \subseteq \text{users}$

$\forall i : \text{dom } \text{hated} \bullet \text{hated}(i) \subseteq \text{songs}$

$\text{dom}(\text{loved}) \subseteq \text{users}$

$\forall i : \text{dom } \text{loved} \bullet \text{loved}(i) \subseteq \text{songs}$

forall  $i : \text{dom}(\text{hated}) \cup \text{dom}(\text{loved})$  —  $\text{hated}(i) \cap \text{loved}(i) = \emptyset$

end

(Blocked by: union in quantifier domain - parser issue)

### Solution 50

(a)

$A == \text{users} \bigcup \text{ran}(\text{playlistSubscribers})$

(Blocked by: bigcup operator not implemented)

(b)

$B == \{p : \text{dom } \text{playlistSubscribers} \mid \#\text{playlistSubscribers}(p) \geq 100\}$

(c)

$$C == (\mu u \in \text{dom}(\text{loved}) \rightarrow \forall v \in \text{dom } \text{loved} \bullet u \neq v \rightarrow (\text{loved}(u)) \wedge (\text{loved}(v)))$$

(Blocked by: nested quantifiers in mu - parser ambiguity)

(d)

$$D == (\mu s \in \text{songs} \rightarrow \forall t \in \text{songs} \bullet s \neq t \rightarrow \{u \in \text{UserId} \mid s \in \text{loved}(u)\} \wedge \{u \in \text{UserId} \mid t \in \text{loved}(u)\})$$

(Blocked by: nested quantifiers in mu - parser ambiguity)

### Solution 51

(a)

Let's first define two helper functions:

$$\text{loveHateScore} : \text{SongId} \rightarrow \mathbb{N}$$

$$\begin{aligned} & \text{forall } i \in \text{songs} \rightarrow \{u \in \text{UserId} \mid i \in \text{loved}(u)\} = \{u \in \text{UserId} \mid i \in \text{hated}(u)\} \\ \Rightarrow & \end{aligned}$$

$$\text{loveHateScore}(i) = \{u \in \text{UserId} \mid i \in \text{loved}(u)\} - \{u \in \text{UserId} \mid i \in \text{hated}(u)\}$$

and

$$\begin{aligned} & \text{forall } i \in \text{songs} \rightarrow \{u \in \text{UserId} \mid i \in \text{loved}(u)\} \neq \{u \in \text{UserId} \mid i \in \text{hated}(u)\} \\ \Rightarrow & \end{aligned}$$

$$\text{loveHateScore}(i) = 0$$

$$\boxed{\begin{array}{l} \text{playlistCount : SongId} \rightarrow N \\ \forall i : \text{songs} \bullet \text{playlistCount}(i) = \#\{p : \text{dom playlist} \mid i \in \text{ran playlist}(p)\} \end{array}}$$

We then have:

$$\boxed{\begin{array}{l} \text{length : SongId} \rightarrow N \\ \text{popularity : SongId} \rightarrow N \\ \text{dom length} \subseteq \text{songs} \quad \text{dom popularity} \subseteq \text{songs} \\ \forall i : \text{songs} \bullet \text{popularity}(i) = \text{loveHateScore}(i) + p \end{array}}$$

(b)

`mostPopular : SongId`

$(\exists \text{exists1 } i : \text{songs} \mid \forall j : \text{songs} \bullet i \neq j \mid \text{popularity}(i) < \text{popularity}(j)) \Rightarrow$

$\text{mostPopular} = (\mu \text{ i : songs} \mid \forall j : \text{songs} \bullet i \neq j \mid \text{popularity}(i) < \text{popularity}(j))$

and

$\text{not } (\exists \text{exists1 } i : \text{songs} \mid \forall j : \text{songs} \bullet i \neq j \mid \text{popularity}(i) < \text{popularity}(j)) \Rightarrow$

`mostPopular = nullSong`

(Blocked by: nested quantifiers in mu - parser ambiguity)

(c)

`playlistsContainingMostPopularSong == {i : dom playlists | mostPopular ∈ ran playlists(i)}`

### Solution 52

(a)

premiumPlays : seq(Play) - $\hookrightarrow$  seq(Play)  
 premiumPlays( $i\ddot{\iota}$ ) =  $i\ddot{\iota}$   
 forall x : Play; s : seq(Play) —  
 $\text{premiumPlays}(\text{ix}_i^s) = \langle x \rangle^p \text{remiumPlays}(s) \text{if } \text{userStatus}(x.2) = \text{premium}$   
 $\text{premiumPlays}(s) \text{ if } \text{userStatus}(x.2) = \text{standard}$

(Note: Uses camelCase for fuzz compatibility)

(b)

standardPlays : seq(Play) - $\hookrightarrow$  seq(Play)  
 standardPlays( $i\ddot{\iota}$ ) =  $i\ddot{\iota}$   
 forall x : Play; s : seq(Play) —  
 $\text{standardPlays}(\text{ix}_i^s) = \langle x \rangle^s \text{tandardPlays}(s) \text{if } \text{userStatus}(x.2) = \text{standard}$   
 $\text{standardPlays}(s) \text{ if } \text{userStatus}(x.2) = \text{premium}$

(Note: Uses camelCase for fuzz compatibility)

(c)

cumulativeLength : seq(Play) - $\hookrightarrow$  N  
 cumulativeLength( $i\ddot{\iota}$ ) = 0  
 forall x : Play; s : seq(Play) —  
 $\text{cumulativeLength}(\text{ix}_i^s) = \text{length}(x.1) + \text{cumulativeLength}(s)$

(Note: Uses camelCase for fuzz compatibility)
