

$[ShowId, EpisodeId]$

$$\frac{\begin{array}{l} podcasts : \mathbb{F} ShowId \\ podcast_episodes : ShowId \rightarrowtail \mathbb{F} EpisodeId \end{array}}{podcasts \subseteq \text{dom } podcast_episodes}$$

Later in document we can reference `podcast_episodes` globally:

$Answer == \{ s : \text{dom } podcast_episodes \mid \#(podcast_episodes(s)) > 5 \}$
