

Sequence Basics

Example 1 : Sequence Types

Sequence types define collections of ordered elements:

```
seq ℕ  
seq ℤ  
iseq ℕ
```

Example 2 : Sequence Literals (Unicode)

Sequences can be written with Unicode angle brackets:

```
⟨⟩  
⟨a⟩  
⟨a, b, c⟩  
⟨1, 2, 3, 4⟩
```

Example 3 : Sequence Literals (ASCII)

ASCII angle brackets are also supported:

```
⟨⟩  
⟨a⟩  
⟨a, b, c⟩  
⟨1, 2, 3, 4⟩
```

Example 4 : Sequences elem Expressions

Sequences can appear in various contexts:

```
s ∈ seq ℕ  
#⟨⟩  
#⟨a, b, c, d⟩
```
