

My First Proof

We prove that conjunction implies each of its components.

Part (a) : p land q implies p

$$\frac{\frac{\lceil p \wedge q \rceil^{[1]}}{p} [\wedge \text{-elim-1}]}{p \wedge q \Rightarrow p} [\Rightarrow \text{-intro}^{[1]}]$$

Part (b) : p land q implies q

$$\frac{\frac{\lceil p \wedge q \rceil^{[1]}}{q} [\wedge \text{-elim-2}]}{p \wedge q \Rightarrow q} [\Rightarrow \text{-intro}^{[1]}]$$
