

Phase 17: Proper Examples (lnot TEXT blocks)

Example : Semicolon bindings elem axdef

$$\left| \begin{array}{l} dummy : \mathbb{N} \\ \hline dummy = 0 \\ \forall x : \mathbb{N}; y : \mathbb{N} \bullet x + y > 0 \end{array} \right|$$

Example : Function on sequences

[EntryFTP]

$$\left| \begin{array}{l} seqlen : seq \ EntryFTP \rightarrow \mathbb{N} \\ \hline seqlen(\langle \rangle) = 0 \\ \forall x : EntryFTP; s : seq \ EntryFTP \bullet seqlen(\langle x \rangle \frown s) = 1 + seqlen(s) \end{array} \right|$$

Example : Nested quantifier

[PersonFTP]

$$\left| \begin{array}{l} constraint : \mathbb{N} \\ \hline constraint = 1 \\ \forall p : PersonFTP; n : \mathbb{N} \bullet n > 0 \end{array} \right|$$
